

THE ARCHIMATE® MODELING LANGUAGE CLASSIC COLOR SET

The ArchiMate® Modeling Language has been a prominent modeling tool in the Enterprise Architecture space for well over 20 years. The adoption of ArchiMate can be attributed to its recognizable visual features. The original color palette has been a staple for Practitioners however, they have requested that the Forum provide an alternative color palette to keep the tool looking fresh. The classic color set will not be retired or replaced, the alternative set will be used in all future publications from The Open Group.

Long-term practitioners and those who review models regularly can easily identify an ArchiMate model by the use of these colors. Many tool vendors and individuals have adopted this or a very similar version to meet their needs.
