

Jericho Forum Fall 2007 Conference @ InfoSecurity NY
Jacob Javits Center, New York, NY
Level 1, Hall 1A, Meeting Room 1A24
Tuesday September 11 2007

● **Introduction**

The Jericho Forum's Board of Management and Members invite you to participate in this 1-day Conference:

- to hear from Jericho Forum customer-members how the Jericho Forum approach shows the way forward for the information security solutions we all need
- to hear from vendors and solutions suppliers how they are delivering de-perimeterized products and solutions to the Jericho Forum "blueprint"
- to ask searching questions that will enable you to verify why in today's global, networked, Internet-driven world, there is no viable alternative security strategy

After an opening keynote and update on the Jericho Forum's objectives, challenges and its fundamental business case, speakers from vendors and solutions providers will describe how they are aligning their products and solutions to the Jericho Forum blueprint.

● **The forum's perspective on the future**

IT-dependent businesses are increasingly recognizing that traditional security mechanisms no longer meet today's increasingly tough demands for conducting business across an open, extended-enterprise environment. A new model is needed - one that enables business to embrace the Internet and to securely exploit public infrastructures and services directly within their technology and business boundaries. Such a model would connect an organization's business processes to all external stakeholders, seamlessly and securely; enabling employees, suppliers and customers to collaborate anytime, anywhere and at the lowest cost to all.

Jericho Forum members understand the advantages of accepting this "de-perimeterized" approach and many have already demonstrated benefits from implementing their first steps towards it. The Jericho Forum is showing the way by progressively identifying the key business and technology drivers that shape the realization of this new model.

We now need to turn this vision into reality – by defining the requirements for the open systems, standards-based, solutions that today's business really needs, and working with vendors and solutions providers to develop the required enabling technologies.

● Speakers

The presenters will describe their views on the directions and trends that they anticipate tomorrow's security products and solutions will take to enable secure, de-perimeterized, global working across all organizations. They will welcome your feedback throughout this conference.

● Agenda

10:00 Refreshments

10:30 Welcome, Introduction and Keynote – Bill Cheswick

Jericho Forum Keynote: 40 years of Internet Security, and the future for firewalls

11:00 Myths and realities about de-perimeterization – Paul Simmonds, ICI

Today and tomorrow's challenges; business case; fundamentals; published papers

11:40 Securing your information – Joseph Ansanelli, Vontu

Data management, data leakage, & moving from network-centric to data-centric architecture

12:10 Analyst View – Dan Blum, Burton Group

Perspectives on de-perimeterization, and future trends in information security architecture

12:30 Networking Lunch

13:30 Security architecture implications of de-perimeterization – Carl Ellison, Microsoft

Our target infrastructure designs and steps we can take today to get there

14:05 Security Convergence – David Ting, Imprivata

Security Convergence: the myth, the truth, the reality

14:40 Understanding Identity-as-a-Service – Nashant Kaushik, Oracle

Externalize identity as a standards-based service for business applications

15:15 Analyst View – Jeffrey Wheatman, Gartner

Best practices in security architecture

15:40 Panel Q&A Session

An opportunity to voice your opinion and obtain feedback

16:10 Refreshments and Informal Discussions

16:30 Close
