#### 4. Characterization of the Lottery Retailer-Focused Website

*This section identifies the optional requirements associated with the Lottery Retailer-Focused Website. Your Organization is not required to provide support for these optional requirements, but you are required to indicate which ones you support and in what capacity. Please answer each question below and provide supporting text, as appropriate.*

##### Alternate Website Formats

**Question 1:** *Does your organization utilize email to provide automated reminders tied to key events?*

Response:

- Yes  
 No

Rationale:

Utilizing email to provide automated reminders tied to key events is optional.

Reference:

Core Retailer Web-Based Applications, October 2006 - Section 4.1.1.3

**Question 2:** *Does your organization utilize SSH File Transfer Protocol (SFTP) as a means to distribute XML files via FTP technology?*

Response:

- Yes  
 No

Rationale:

Utilizing SSH File Transfer Protocol (SFTP) as a means to distribute XML files via FTP technology is optional.

Reference:

Core Retailer Web-Based Applications, October 2006 - Section 4.1.1.3

**Question 3: Does your organization provide chat-based applications that are consistent with the Jabber protocol?**

Response:

- Yes  
 No

Rationale:

Providing chat-based applications is optional. If they are provided, they should be consistent with the Jabber protocol.

Reference:

Core Retailer Web-Based Applications, October 2006 - Section 4.1.1.3

**Question 4: Does your organization distribute data in non-XML formats, such as spreadsheet files, text-based files, or Adobe PDF files?**

Response:

- Yes  
 No

If you selected "Yes", please explain the situations in which your organization might distribute data in non-XML formats, the types of data that might be distributed in non-XML format, and the format in which the data would be distributed.

Rationale:

The Best Practice allows for the distribution of data in non-XML formats.

## 5. Validation Environment

*Please specify the hardware platform and software environment in which this Lottery Retailer-Focused Website's conformance has been demonstrated, defining this validation environment in sufficient detail to enable the validation process to be repeated. For the hardware platform, this should include the unique name and identity of the hardware used and its release or version number. For the software architecture, this should include the name, version number, and release identifier of all the software components, including the applicable operating system and web server application.*
