

**Jericho Forum Meeting
Chicago, USA
Friday May 12th, 2006**

Hosted by Motorola, Inc.

• See the future

Organizations are increasingly recognizing that traditional security mechanisms no longer meet today's tougher demands for conducting business across an open, extended-enterprise environment. A new model is needed: one that enables business to embrace the Internet and to securely exploit public infrastructure and services directly within the organization's technology and business boundaries. Such a model would connect an organization and its business processes to all external stakeholders, seamlessly and securely, enabling employees, suppliers, and customers to collaborate anytime, anywhere, and at the lowest cost to all.

This is a radical vision. But the Jericho Forum believes it to be the right one to embrace. Why? Because Jericho Forum members understand the benefits and many have already demonstrated benefits from implementing the first steps towards this goal. The Jericho Forum has already identified the key business and technology drivers that shape the realization of the new model.

So it's now time to all work together to turn this vision into reality: working with vendors to develop the enabling technology, and with business partners to realize its implementation.

• Invitation

The international IT security thought leadership group, Jericho Forum, invites IT managers and technologists from business and government to attend this 1-day meeting, to hear from leaders of the Jericho Forum why they are showing the way forward on the information security solutions we need and why we believe you will want to get involved, and to respond to your questions

During the day we aim to realize the known expressions of interest and support for the Vision and Mission of the Jericho Forum (see www.jerichoforum.org) and convert that interest into active involvement and participation.

• Speakers

Presenters from a diverse range of industries will describe their efforts to work with the global vendor community to achieve availability of solutions based on open standards that will enable secure, Boundaryless Information Flow™ across organizations. Confirmed speakers include:

- Nick Bleech (IT Security Director, Rolls Royce)
- Bill Boni (VP, Information Protection & Security, Motorola)
- Scott Shepard (Information Protection Services, Motorola)
- David McCaskill (Global Business Services, Procter & Gamble)
- Paul Simmonds (Global Information Security Director, ICI)
- Stephen Whitlock (Chief Security Architect, The Boeing Company)
- Mark Winzenburg (Digital Security, BP)

They will present the case for such standards, on the basis that the need has been growing for many years as organizations seek to exploit the business potential of the Internet, while at the same time tackling the increasing problem of their disappearing corporate IT security perimeter.

The presenters welcome your pro-active participation throughout this event.

● Outline Agenda

Thursday May 11th

19.30 Pre-meeting dinner (self-funded) - Jericho Forum speakers will welcome meeting attendees to discuss matters of mutual interest – venue to be advised.

Friday May 12th

09:00 Registration & coffee
