Jericho Forum Seminar
Museum of Flight, Seattle, WA., USA
Sept 21-22, 2006

Hosted by The Boeing Corporation

● Invitation

The Jericho Forum invites business managers, IT managers, strategists and technologists from industry, commerce, government, and defense, to attend this 2-day Seminar:

- to hear from Jericho Forum members how the Jericho Forum approach provides the effective information security solutions we need (see www.jerichoforum.org)
- to ask those searching questions that will enable you to verify why in today's global, networked, Internet-driven world there is no viable alternative strategy.

● Why attend both days?

The first day will explore security challenges surrounding 4 key areas - clients, networks, wireless, and servers. The second day will bring the outcomes from the first day into a concentrated review of the Jericho Forum's approach to assuring effective security solutions in our global networked, Internet-driven business world.

Clearly day-1 will challenge the more technically-minded, while day-2 is for both day-1's technology strategists & architects, and for CISO/CIO/CTO business decision-makers.

● The future

IT-dependent businesses are increasingly recognizing that traditional security mechanisms no longer meet today's tougher demands for conducting business across an open, extended-enterprise environment. A new model is needed - one that enables business to embrace the Internet and to securely exploit public infrastructures and services directly within their technology and business boundaries. Such a model would connect an organization's business processes to all external stakeholders, seamlessly and securely, enabling employees, suppliers, and customers to collaborate anytime, anywhere, and at the lowest cost to all.

Jericho Forum members understand the benefits of accepting this "de-perimeterized" approach, and many have already demonstrated benefits from implementing their first steps towards it. The Jericho Forum is showing the way by progressively identifying the key business and technology drivers that shape the realization of this new model.

We need to turn this vision into reality – defining the requirements for the open systems standards-based solutions that today's business really needs. Jericho Forum members are

working with vendors to develop the required enabling technologies, and with our business partners and customers to realize its implementation.

● Speakers

Presenters from a diverse range of industries will describe their efforts to work with vendors to achieve availability of solutions that will enable secure, de-perimeterized working across organizations. The presenters welcome your pro-active participation throughout this event.

● Outline Agenda

Thursday Sept 21:
09.00 Reception
09.30 Introductions and overview for the day
09.40 Our de-perimeterized environment - responding to the challenge
10.40 Break
11.00 Client machines
