Seminar: Sydney, Australia
Thursday 8th September 2005

Hosted by Qantas Airways

● Fact

It's time to accept that your information security perimeter has gone and for you to join other information security professionals on the development of a security architecture and design approach that will allow business to continue in an open, Internet-driven, networked world.

Members of the international IT security thought leadership group, Jericho Forum, are holding a meeting in Sydney on Thursday 8th September in order to progress their Vision and Mission to drive and influence the development of security solutions and open standards that support "de-perimeterization".

● Invitation

The Jericho Forum invites IT managers and technologists from business and government to attend this 1-day seminar and hear from leaders of the Jericho Forum why they are showing the way forward on the information security solutions we need, and why we believe you will want to get involved.

During this seminar we aim to actively engage and realize the known expressions of interest and support in Australia and New Zealand for the vision and mission of the Jericho Forum (see www.jerichoforum.org) and to convert that interest into direct contributions through email, Web, and teleconference participation in our various Working Groups.

● Speakers

Presenters from a diverse range of industries, such as financial, petrochemical, consumer products, communications and travel, will be describing their efforts to work with the vendor community to achieve open standards that will enable secure, Boundaryless Information Flow^{TM} across organizations.

Confirmed speakers include:
- Mr Nick Bleech (IT Security Director at Rolls Royce)
- Mr David Lacey (Director of Information Security at Royal Mail)
- Mr David McCaskill (Manager, IT Infrastructure & Governance at Procter & Gamble)
- Dr John Meakin (Group Head of Information Security at Standard Chartered Bank)
- Mr Shane Tully (Information Security Architect at Qantas)
- Mr Stephen Whitlock (Chief Security Architect at The Boeing Company)

They will present the case for such standards, on the basis that the need has been growing for many years as organizations seek to exploit the business potential of the Internet, while at the same time tackling the increasing problem of their disappearing corporate IT security perimeter.

● Outline Agenda

Wednesday 7th September	
19.00 for 19.30	***Pre-meeting dinner*** (self-funded) - Jericho Forum leaders will welcome meeting Seminar attendees to discuss matters of mutual interest – venue is Spanish Terrazas, 541 Kent St, Sydney, cost A$46 pp. See www.jerichoforum.org for further details.
Thursday 8th September	
09.00	***Registration & coffee***
09.30	Welcome, Safety Briefing, & Introductions

● For More Information

Please send an email to the forum's Director, Ian Dobson, at i.dobson@opengroup.org .

● About the Jericho Forum

The Jericho Forum aims to drive and influence development of security standards that will meet future business needs for secure Information and Communications Technology (ICT). These standards will facilitate the secure interoperation of ICT to support collaboration and commerce over open networks, within and between organisations, based on a security architecture and design approach entitled de-perimeterisation. Globally, more than fifty blue-chip user organizations, from all sectors, are working together in order to find a solution and numerous security product suppliers keen to understand the problem space have joined them. The Open Group hosts the Jericho Forum.
