Case Study:
TOGAF & Westpac,
the story so far

We're with you

Australia's First Bank
Why TOGAF?

• Independence

• It’s pretty good

• People accept i!
How are we using it?

- Collect baseline data (overlap/gaps)
  - Documentation
  - Interviews
  - Reviewed current product & services portfolio
- Populate the model
- Identify the owners of the ABB’s
- Embed the model into the way we describe and think about standards
Challenges

• Doesn’t make product decisions for you!
• Training required to develop common appreciation / language
• Some technologies just don’t fit neatly (eg Notes)
Rewards

- We have a common reference point internally and for our vendors
- We argue about interpretation but not about the basics
- Gives us a ready made structure for governance
- Accelerated our ability to implement the necessary disciplines that any model should enable
