The Open Group***

The TOGAF® Standard, *10th Edition*

Supporting Agility in the Digital Enterprise

What is the TOGAF® Standard?

- An Enterprise Architecture methodology and framework
- Developed by and for EA practitioners to architect based on best practices
- Used by the world's leading organizations to simultaneously transform their business and improve operational efficiency
- Comprehensive
- Modular
- Configurable

What is new in this Edition?

Updated Modular structure
Extended Content

Focused on what most practitioners want – more, better, and topical guidance on how to deliver the best Enterprise Architecture that supports their stakeholders and their organization

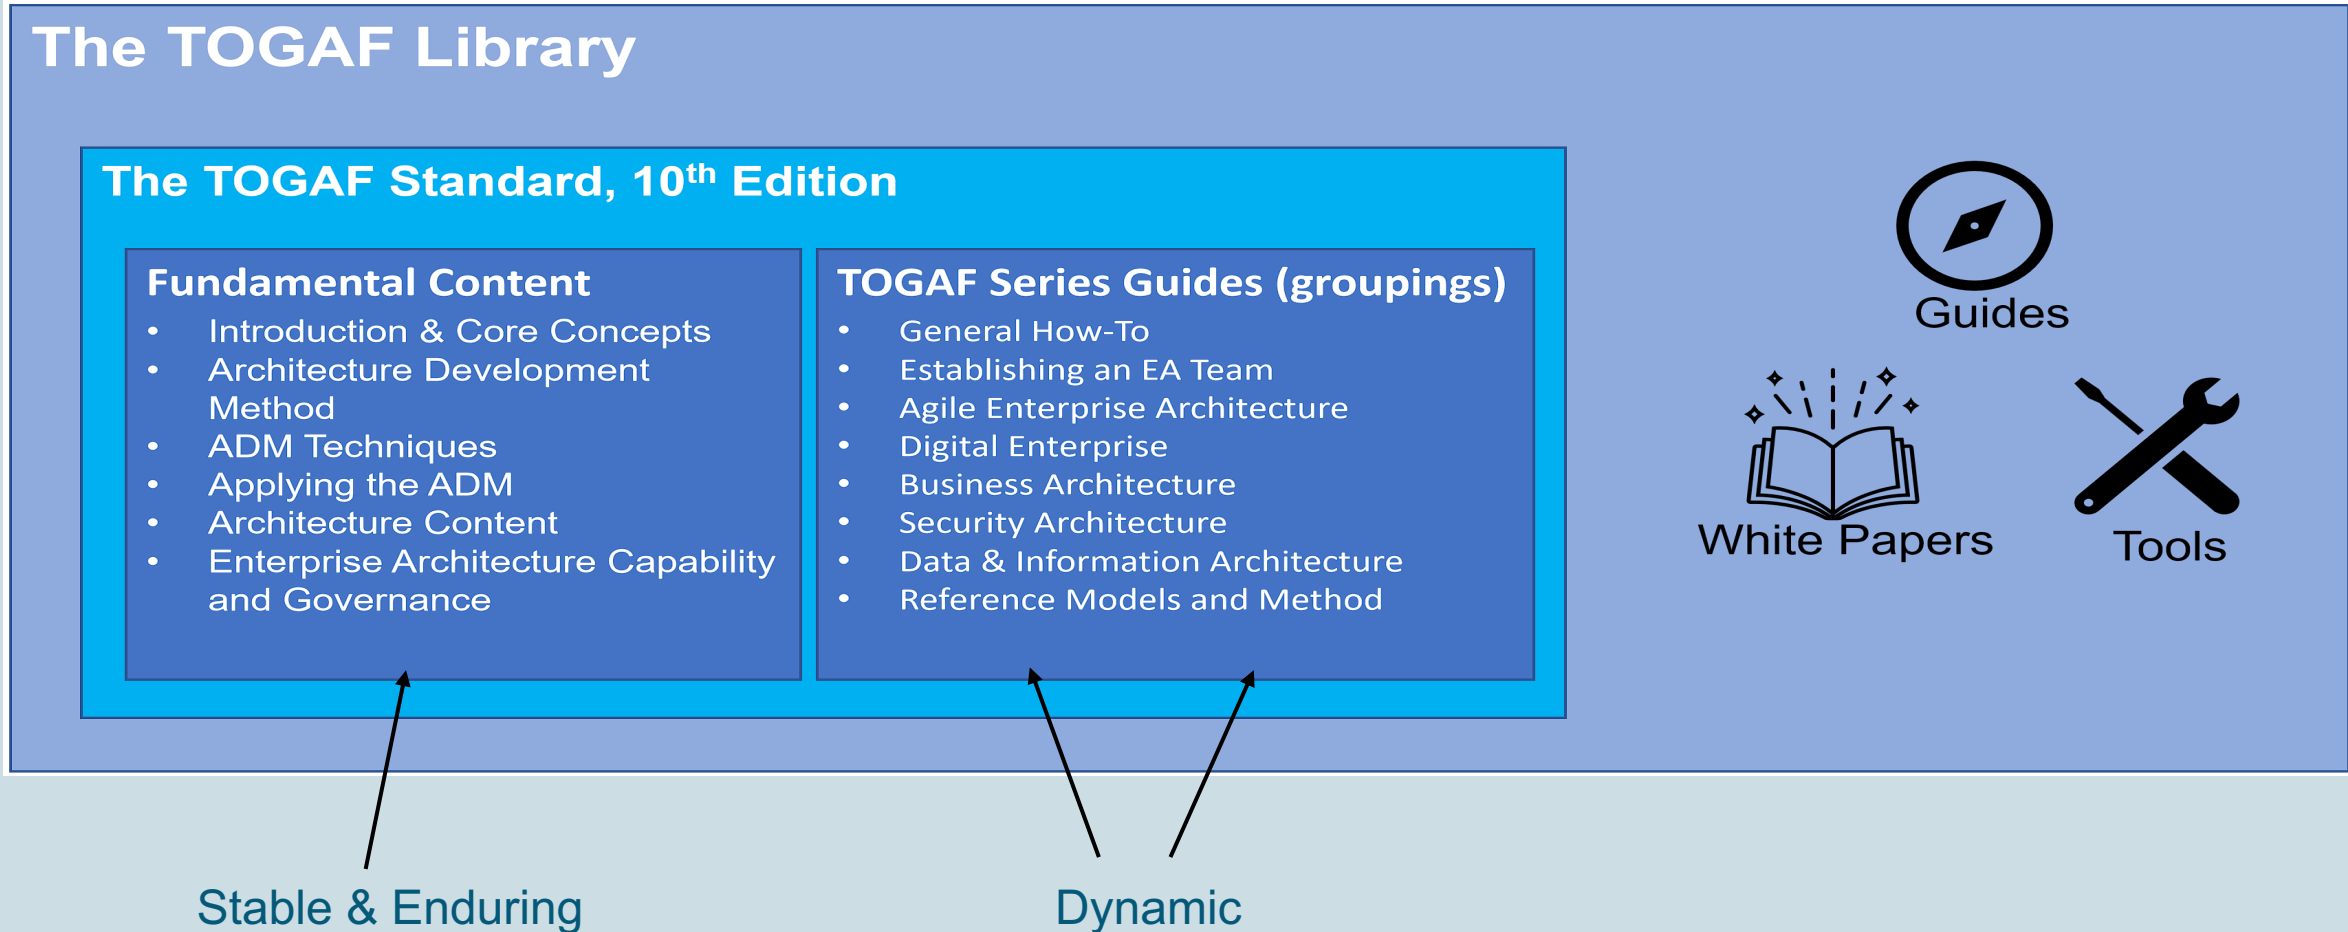

10

Modular Structure

The Open Group Library offers a wide range of publications including standards, guides, webinars, white papers, and more. You can browse by category, or search. In order to download publications from the Library you need an account for The Open Group website. If you have an existing account, [sign in](#). If you are a first time user, create an account [here](#).

The TOGAF Standard Documentation Set

Content Formats

HTML

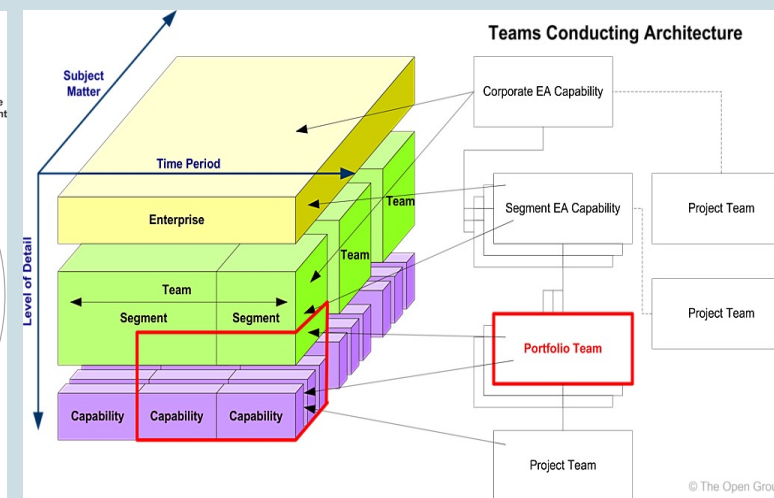

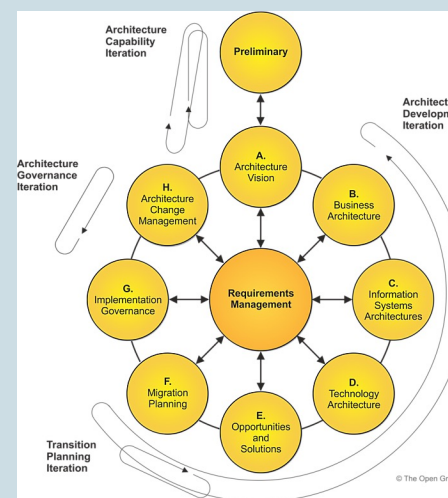

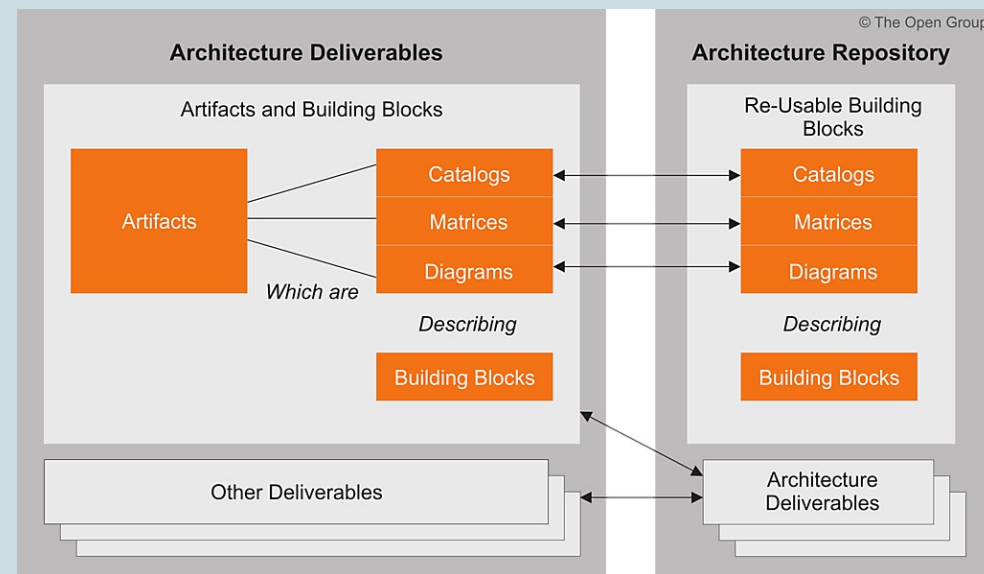

PDF

BOOK

Continuity

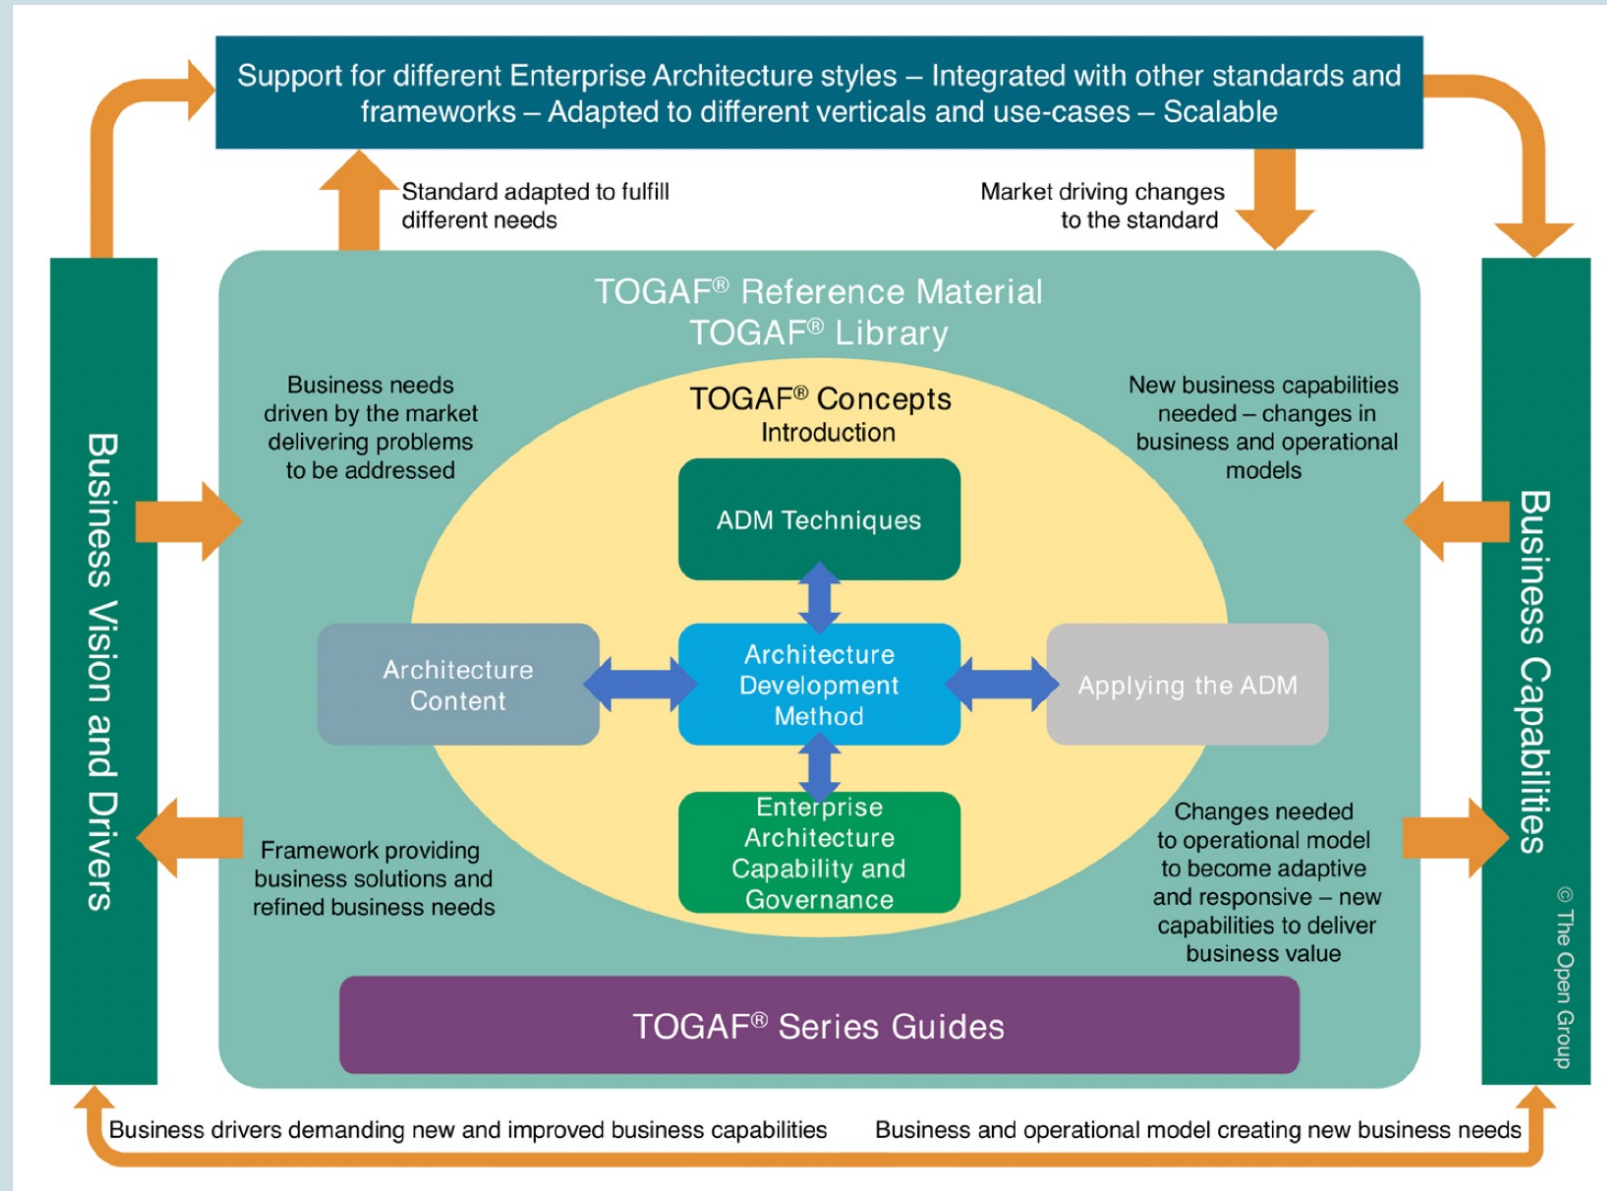

- Core character of the TOGAF® Standard is retained
 - Catalogs, diagrams, and matrices
 - Architecture Development Method (ADM)
 - Enterprise, segment, and capability partitioning

Impactful Change

Fundamental Content is revised and reorganized (6)

Expanded Content & Domain Specific Guidance

20 Series Guides, covering:

- General How-To
- Establishing an EA Team
- Agile Enterprise Architecture
- Digital Enterprise
- Business Architecture
- Security Architecture
- Data & Information Architecture
- Reference Models and Method

Extended guidance for specific topics, concerns, and use cases, asked for by members and practitioners

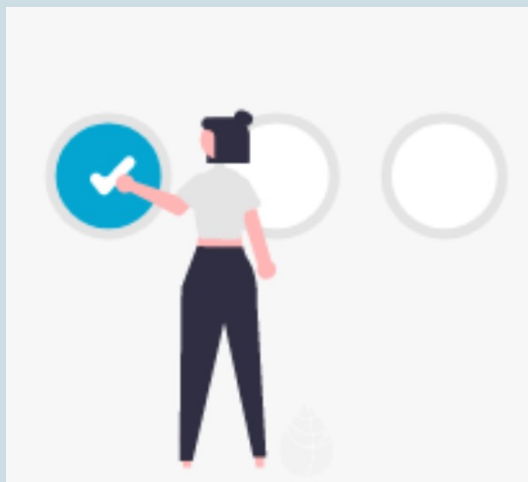

Extended guidance – TOGAF Series Guides

General How To

- A Practitioners' Approach to Developing Enterprise Architecture Following the TOGAF ADM
- Digital Technology Adoption: A Guide to Readiness Assessment and Roadmap Development
- Using the TOGAF Standard in the Digital Enterprise

Domain Specifics

- Business Architecture (6) Business Models, Business Capabilities, Value Streams, Information Mapping, Organization Mapping
- Security Architecture (1) Integrating Risk and Security within a TOGAF Enterprise Architecture
- Data & Information Architecture (1) Customer Master Data Management
- Agile Methods (2) Enabling Enterprise Agility, Applying the TOGAF ADM using Agile Sprints

for specific topics, concerns, and use-cases

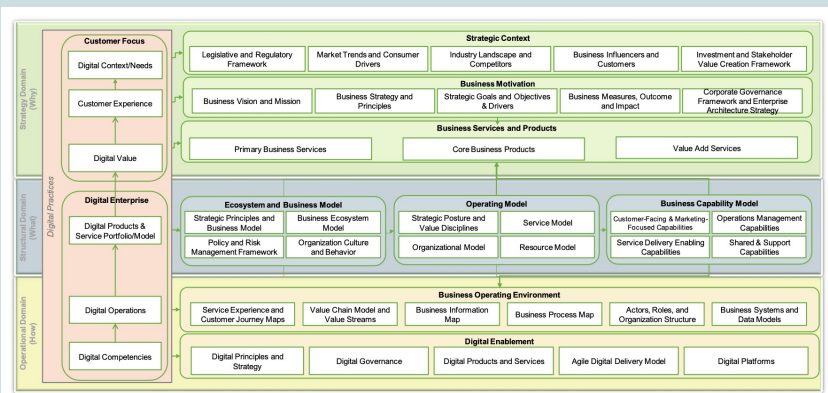

Figure 2: DBRM Elements – Detailed View

Reference Models & Methods

- Digital Business Reference Model
- Government Reference Model
- Architecture Maturity Models
- Architecture Project Management
- Architecture Skills Framework
- Microservices Architecture

Establishing and Evolving an EA Team

- The TOGAF Leader’s Guide to Establishing and Evolving an EA Capability

for specific topics, concerns, and use-cases

Getting Started

An Introduction to the TOGAF® Standard, 10th Edition

A White Paper by:

Dave Hornford, Conexiam

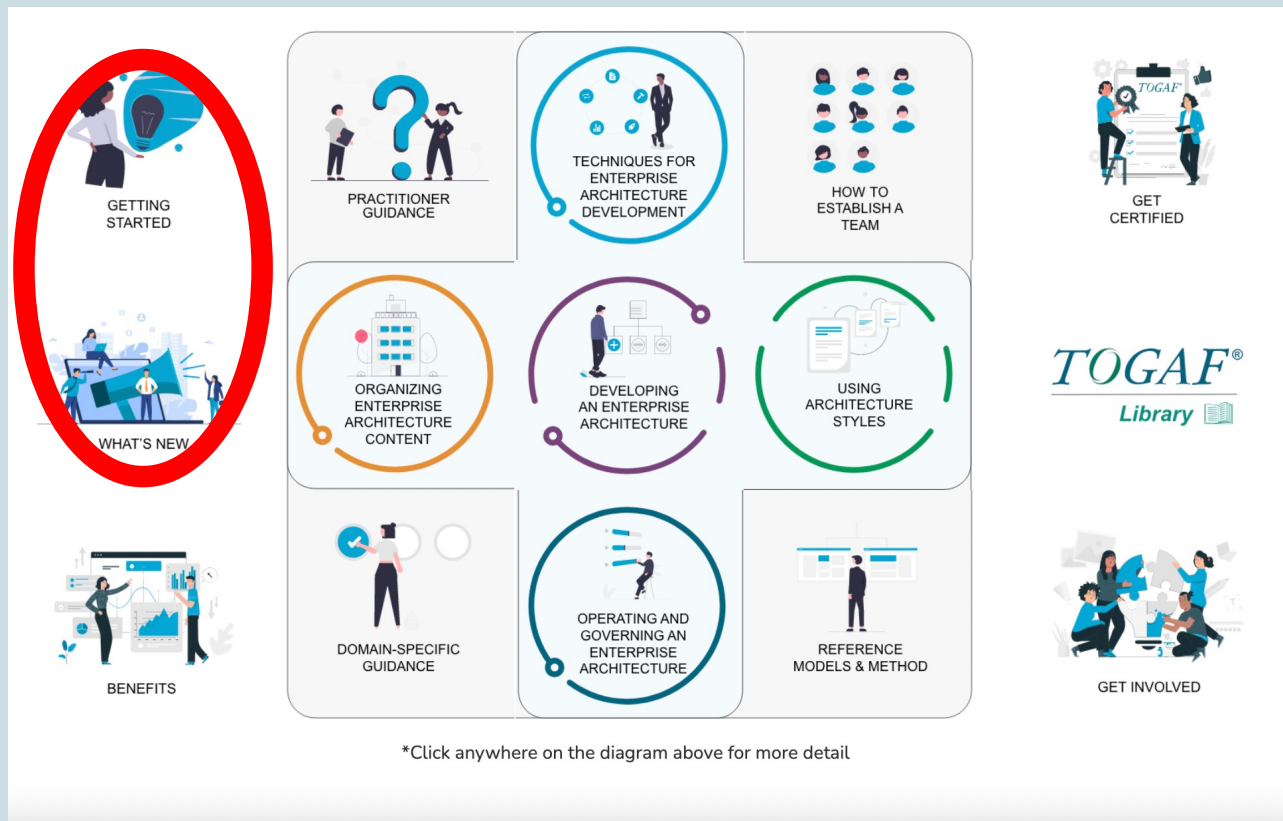

Nathan Hornford, Conexiam

Mike Lambert, Fellow of The Open Group

Ken Street, Conexiam

April 2022

- See the White Paper: An Introduction to the TOGAF® Standard, 10th Edition
 - <http://www.opengroup.org/library/w212>
- Explains the motivation for and substance of the revisions and new additions to the TOGAF Standard, 10th Edition
- Includes recommendations on how to start using the 10th Edition
- Appendix A gives detailed release notes for the changes to the Fundamental Content

www.opengroup.org/togaf/10thedition

Brings together the
Fundamental Content and
TOGAF® Series Guides

Making it easier to navigate
and search the expanded
content

Evolving continuously as
we expand and refresh the
contents of the standard

Provide Feedback Via the Digital Edition

The screenshot shows the website pubs.opengroup.org. The left sidebar contains a navigation menu with the following items: "The TOGAF® Standard", "Table of Contents", "Preface", "Part 1: Introduction", "1 Introduction", "1.1 Overview", "1.2 How to Use this Guide with the TOGAF Framework", and "1.3 Referenced Techniques". The "1 Introduction" item is selected. The main content area displays the title "A Practitioners' Approach to Developing Enterprise Architecture Following the TOGAF® ADM" and the section "1 Introduction". A red circle highlights the "Submit Feedback" button in the top right corner of the page.

The screenshot shows the "Submit Feedback" form on the website. The form is titled "Submit Feedback" and includes the following fields and options:

- Publication ***: TOGAF Standard, 10th Edition
- URL ***: https://pubs.opengroup.org/togaf-standard/admin-practitioners/index.html?_ga=2.267975046.961467218.1652154516-1954752584.1649695415
- DocNo**: C220
- Name ***: First and Last name input fields.
- Email ***: Input field for email address.
- Organization ***: Input field for organization name.
- Classification ***: Radio buttons for "Objection", "Comment", and "Editorial".
- Section Number ***: Input field for section number/name.
- Problem ***: Large text area for describing the problem.
- Action ***: Input field for action.

Important EA Content in The Open Group Library - Models & The Exchange File Format

The Open Group Guide

How to Use the ArchiMate® Modeling Language to Support the TOGAF® Standard

Prepared by The Open Group Architecture Forum and The Open Group ArchiMate Forum

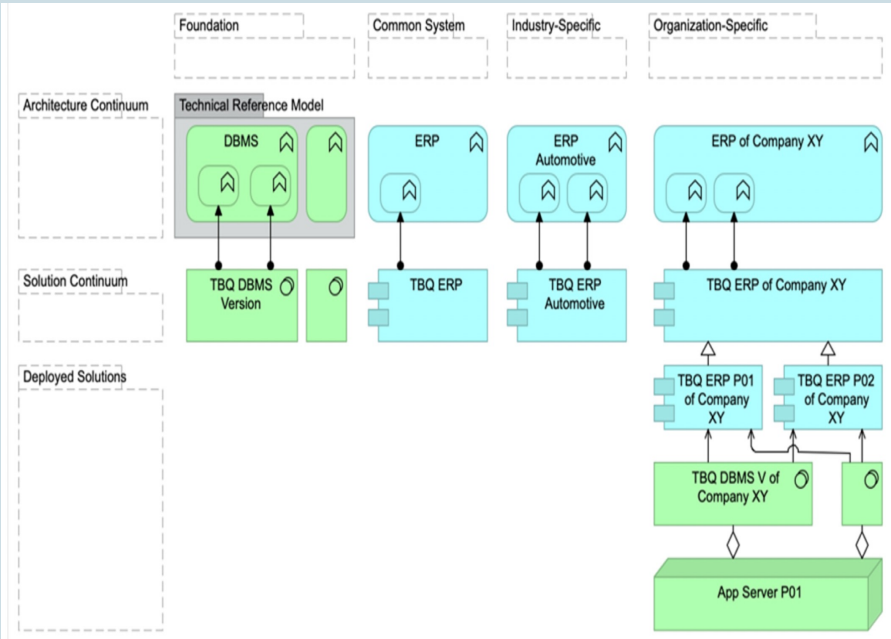

Figure 5: TOGAF Enterprise Continuum Mapped to ArchiMate Elements

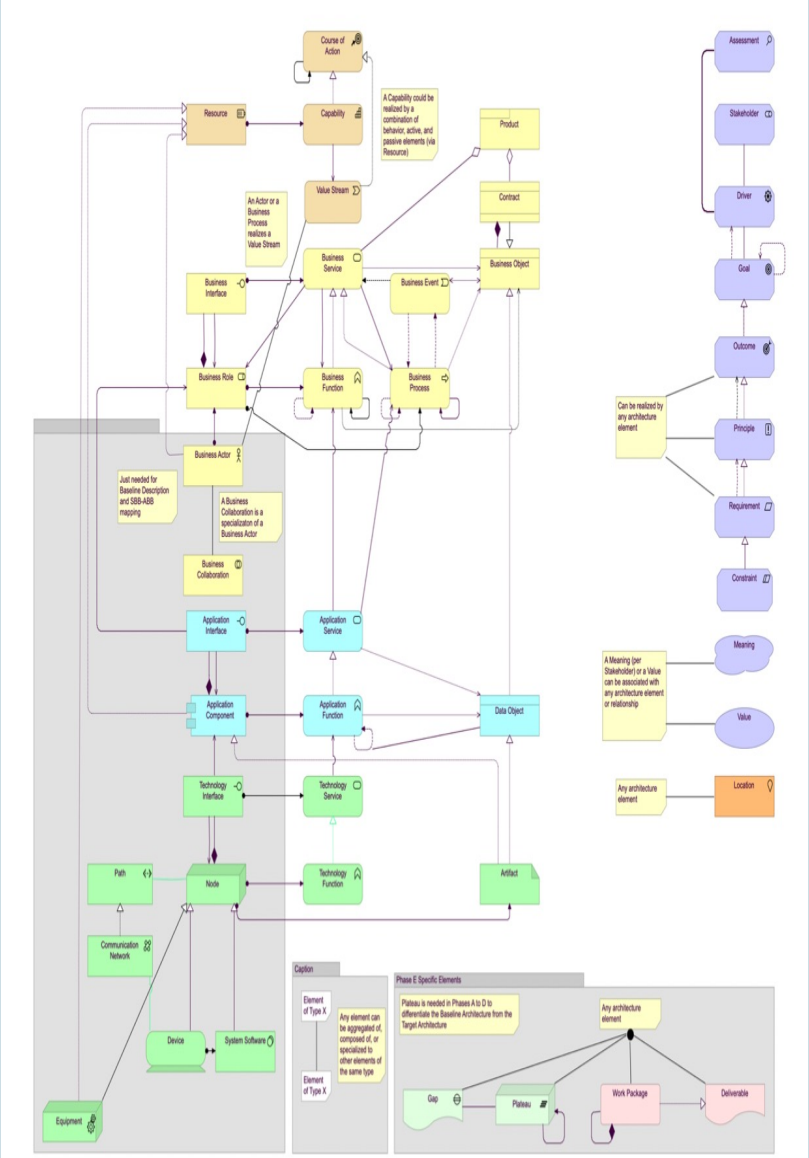

Figure 12: Metamodel Based on the ArchiMate Specification to Cover the Complete TOGAF ADM

Looking Ahead – Content

More TOGAF® Series Guides in development

More supporting content (Guides and White Papers)

More frequent updates to the TOGAF Standard

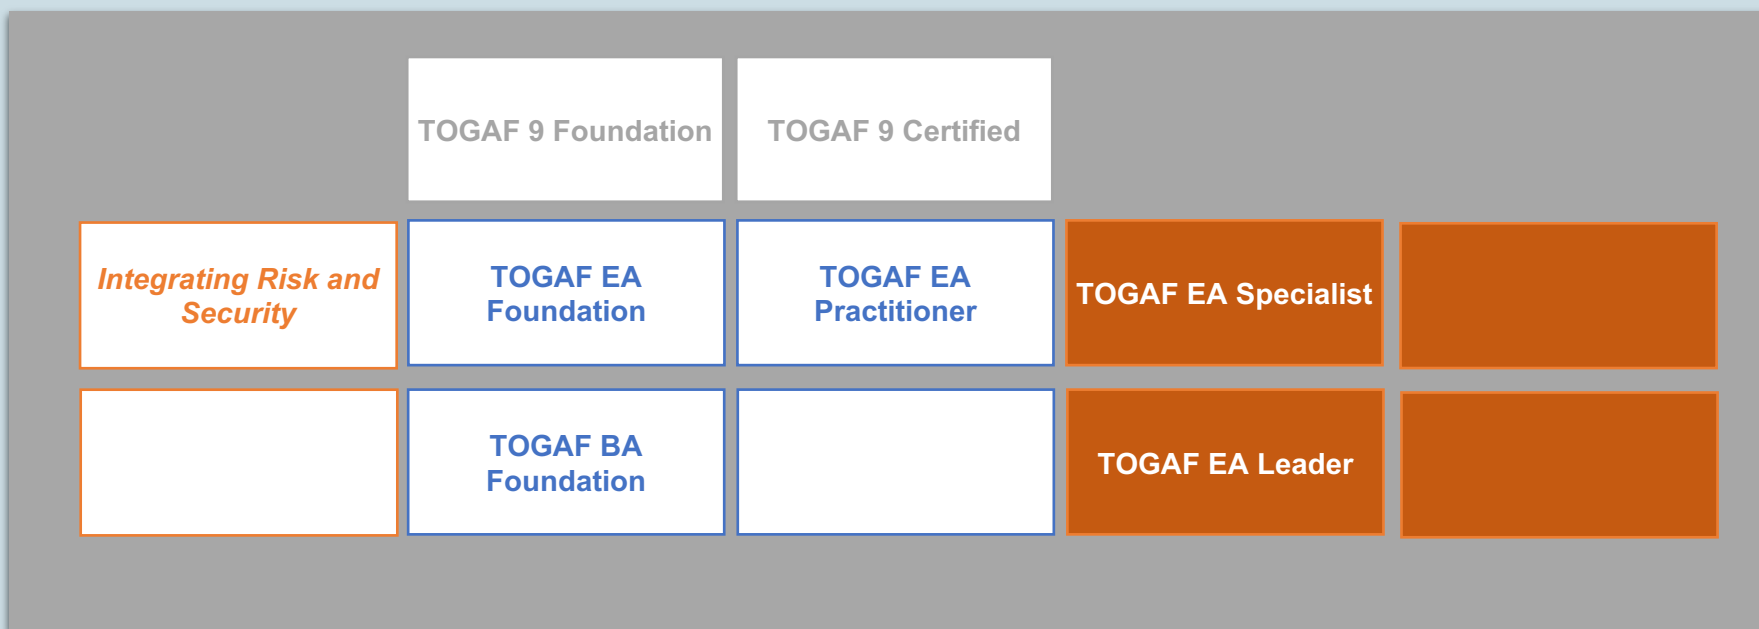

Innovative ways to access and adapt the content

TOGAF® Certification Portfolio

It includes certifications and certification credentials built upon both

- The TOGAF Standard, Version 9.2
- The TOGAF Standard, 10th Edition

Applied Practitioner Badge

Individuals who are TOGAF Enterprise Architecture Practitioner certified and who have satisfactorily completed the **TOGAF Enterprise Architecture Practitioner Learning Studies** are eligible for the Applied Practitioner badge

Practical exercises

Mandatory element of all accredited training

Target Audience: TOGAF® Enterprise Architecture Bridge

Individuals who are
TOGAF 9 Certified, who wish to
update their qualifications as part of
their professional development and
demonstrate their ability to apply
Enterprise Architecture

Achieving business objectives through technology standards

Portfolio of Digital Open Standards

Why do we need a Portfolio?

What We Do - Technology Standards

The Open Group works with customers and suppliers of technology products and services, and with consortia and other standards organizations to capture, clarify, and integrate current and emerging requirements, establish standards and policies, and share best practices. Our standards ensure openness, interoperability, and consensus.

The Open Group [Standards Process](#) defines the procedures for key tasks within The Open Group Standards development activities.

The following Standards Process guidance handbooks are available:

- [A Handbook for Publications Development](#)
- [A Handbook for the Consensus Decision-Making Process](#)
- [A Handbook for Elected Officers of The Open Group Forums and Work Groups](#)
- [A Handbook for Individuals Acting as The Open Group Liaison to Another Organization](#)

The Open Group Standards are published in [The Open Group Library](#).

Why do we need a Portfolio?

Why do we need a Portfolio ?

1. The “as-is” model

- A rich collection of world-class standards
- But content is presented largely stand-alone, no overall view or obvious links

Why do we need a Portfolio?

Why do we need a Portfolio ?

2. The opportunity

- Businesses are transforming to become more “Digital”
 - Business processes, digital systems, and data need to work together and flow freely across the enterprise
 - Speed of transformation is essential
 - Standards are a powerful enabler
- The Open Group has standards that address many of these needs

Why do we need a Portfolio?

Why do we need a Portfolio ?

3. The challenge

- Businesses are transforming to become more “Digital”
 - Business processes, digital systems, and data need to work together and flow freely across the enterprise
 - Speed of transformation is essential
 - Standards are a powerful enabler
- The Open Group has standards that address many of these needs

... but they are mostly stand-alone. Some work has been done, and more is in progress in Forums and Working Groups to enable standards to be used together, but visibility of the links and relationships is limited

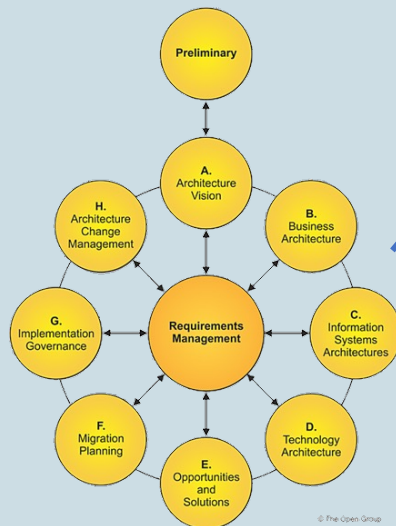

Why do we need a Portfolio?

Why do we need a Portfolio ?

4. The vision

- Portfolio of Digital Open Standards for Digital business, which are connected and consistent, easily accessible through a web-native interface
- Discoverable and searchable, visual, cross-linking

Example

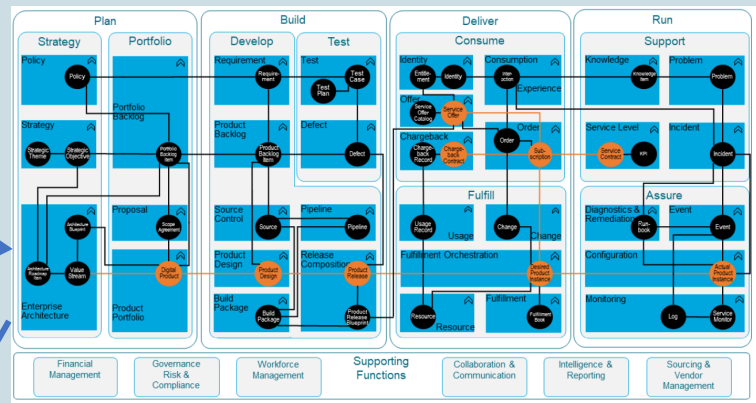

TOGAF® Standard

Click thru to see how strategic architecture fits with business strategy

Click thru to see the detail of EA in business strategy

Click thru to see detail of Security architecture and design

Click thru to see how security relates to other architecture domains

IT4IT™ Standard

Click thru to see how security relates to Enterprise GRC

Click thru to see detail of Security risk assessment within GRC

Open FAIR™ Standards

Benefits

- **Benefits for members and the user community**
 - Greater understanding of relationships between standards, and ability to navigate between them
 - More powerful set of standards, each one clearly supporting others
- **Benefits for content developers in WGs and Forums**
 - Easier cross-referencing between standards
 - Promote consistency and avoid duplication
- **Benefits for The Open Group**
 - Strengthen market position as provider of Digital standards
 - Stronger value proposition for existing and prospective members

ArchiMate® 3.2 Specification

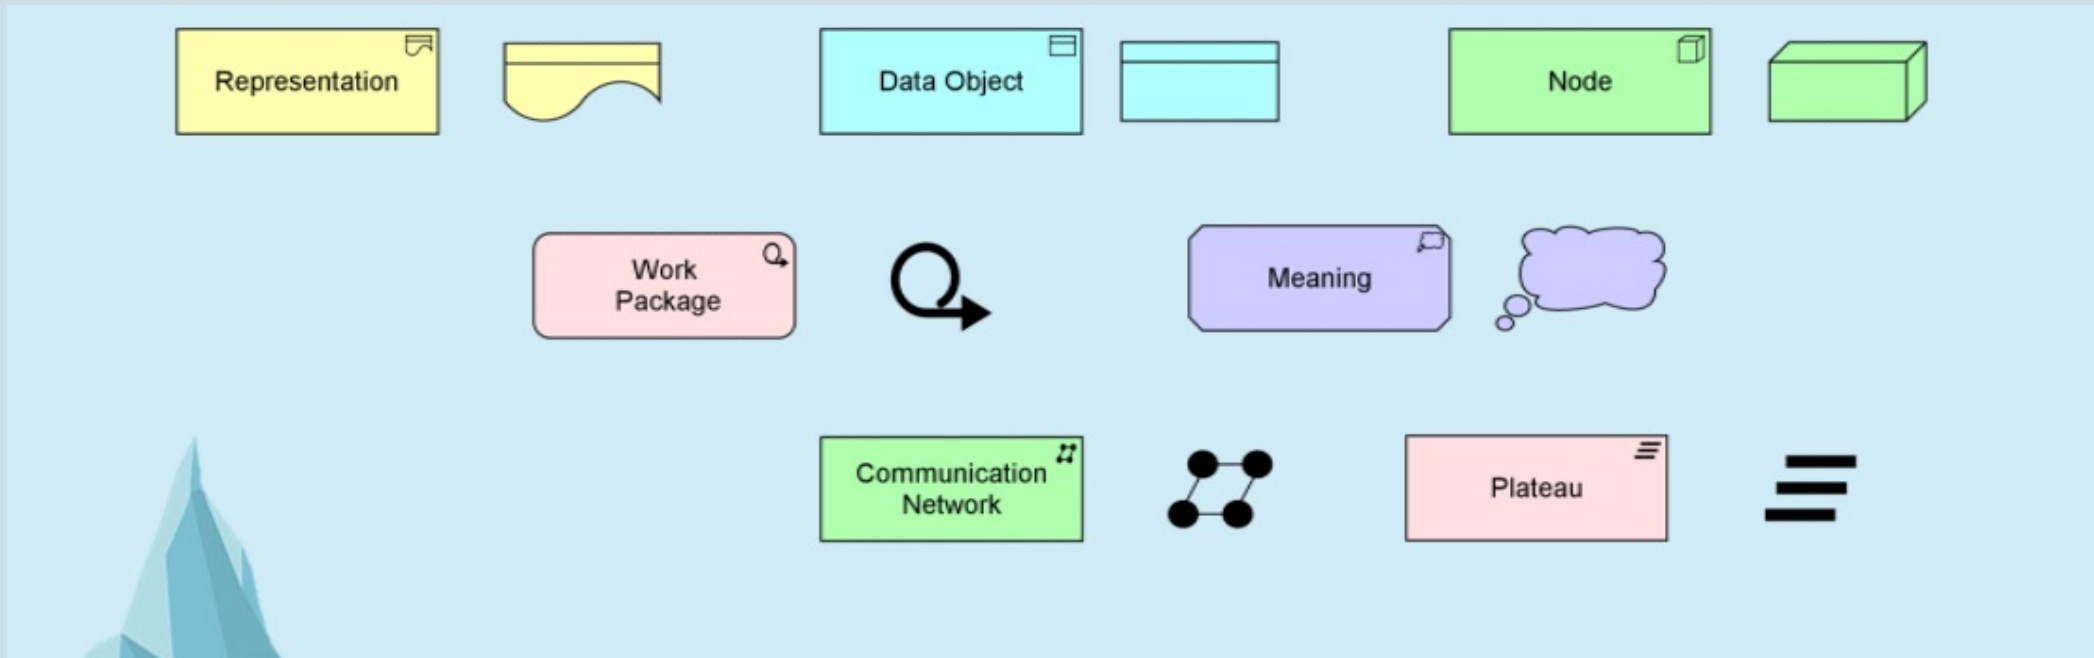

ArchiMate® 3.2 Specification: What's new?

Notation

Consistency: All elements now have both a box and an icon notation, e.g.:

Notation

Business Actor		Grouping		Node		Stakeholder		Resource	
Business Role		Location		Device		Driver		Capability	
Business Collaboration		Application Component		System Software		Assessment		Value Stream	
Business Interface		Application Collaboration		Technology Collaboration		Goal		Course of Action	
Business Process		Application Interface		Technology Interface		Outcome		Work Package	
Business Function		Application Process		Technology Process		Principle		Implementation Event	
Business Interaction		Application Function		Technology Function		Requirement		Deliverable	
Business Service		Application Interaction		Technology Interaction		Constraint		Plateau	
Business Event		Application Service		Technology Service		Value		Gap	
Business Object		Application Event		Technology Event		Meaning			
Contract		Data Object		Artifact					
Representation		Facility		Communication Network					
Product		Equipment		Path					
		Material		Distribution Network					

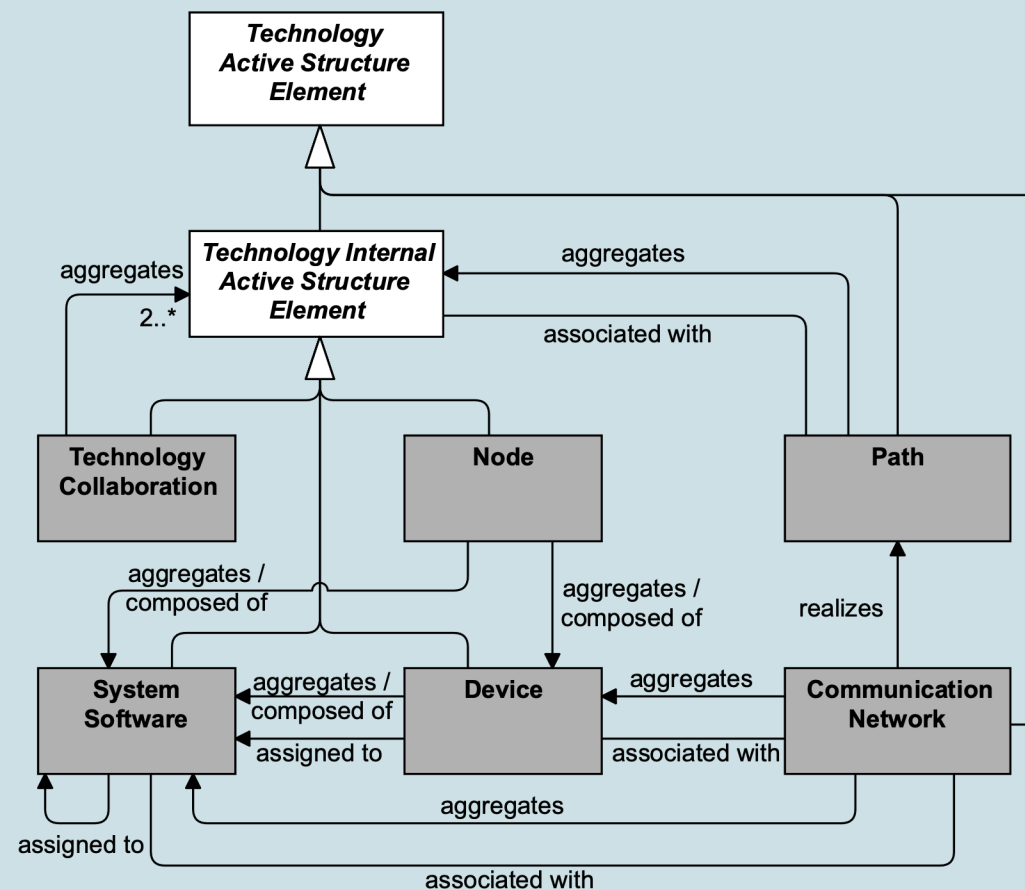

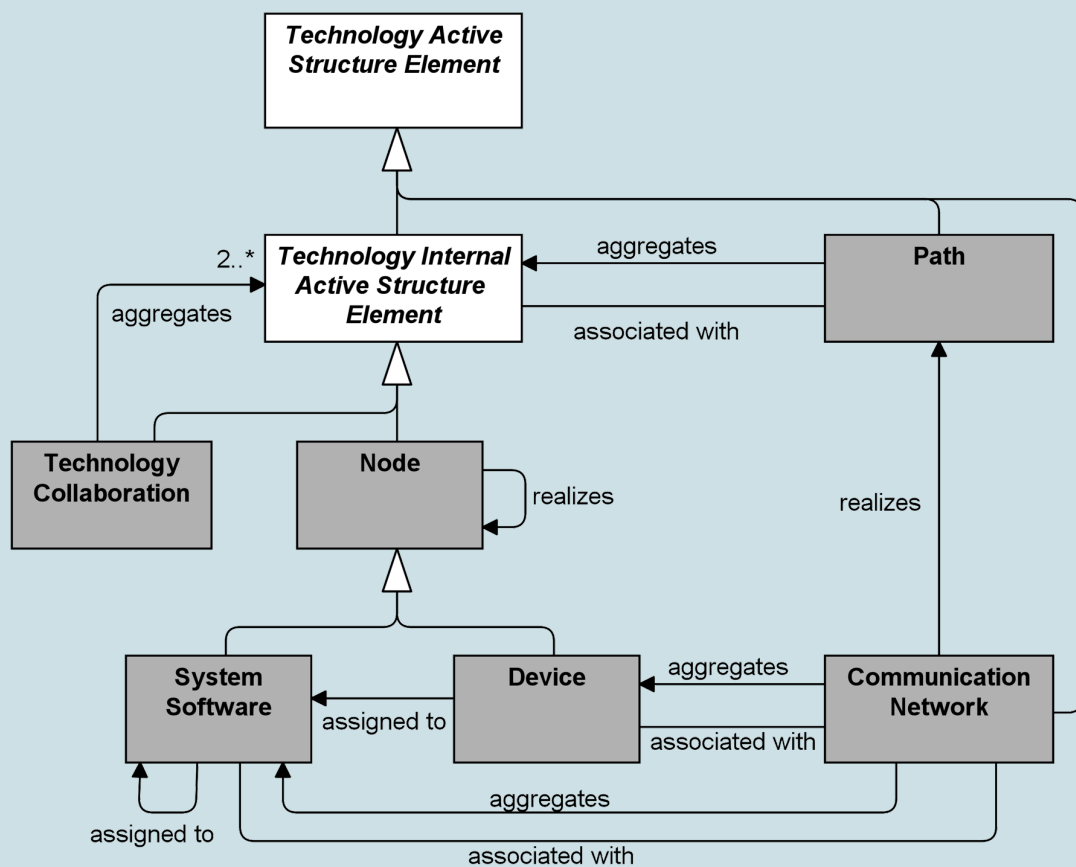

Definitions

- Clarification and simplification of some definitions, e.g.:
 - Old: *A business function represents a collection of business behavior based on a chosen set of criteria (typically required business resources and/or competencies), closely aligned to an organization, but not necessarily explicitly governed by the organization*
New: *A business function represents a collection of business behavior based on a chosen set of criteria such as required business resources and/or competencies, and is managed or performed as a whole*
- Many small improvements in wording and explanations throughout the document

Metamodel

- Structural improvements of the metamodel
 - Especially in the Technology domain

Derivation of Relationships

- Derivation rules themselves are unchanged
- One additional rule, to allow derivation with Grouping
- Restrictions on where derivation rules can be applied have been formalized to reduce ambiguity
- Some fine-tuning of these restrictions to allow other meaningful derivations

Metamodel + Derivations End Result

- Addition of useful direct and derived relationships
 - e.g., Material realizes Equipment,
Plateau aggregates Outcome
- Removal of meaningless and counter-intuitive derivations
 - e.g., Artifact realizes Business Actor,
Device aggregates Facility

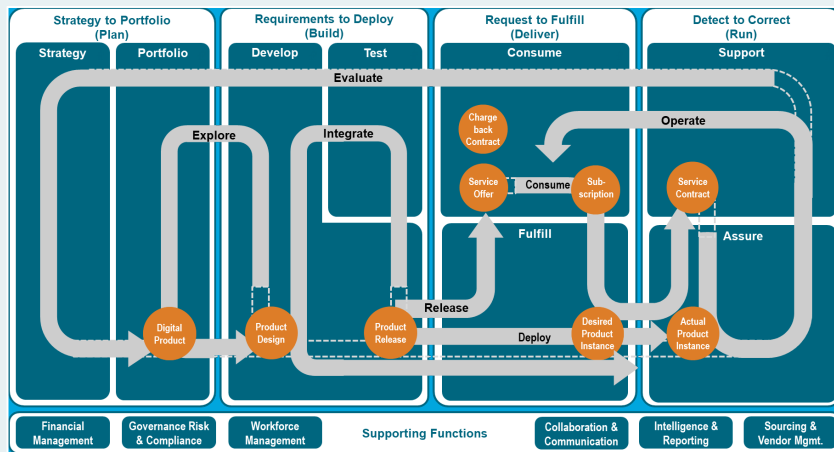

**Introducing
The IT4IT™
Standard,
Version 3.0**

What is the IT4IT™ Standard?

Make your IT Flow 

The IT4IT Standard is a reference architecture that helps to deliver a consolidated, modern, and automated digital delivery model that accelerates flow and lowers the cost and risks involved in managed digital products and services

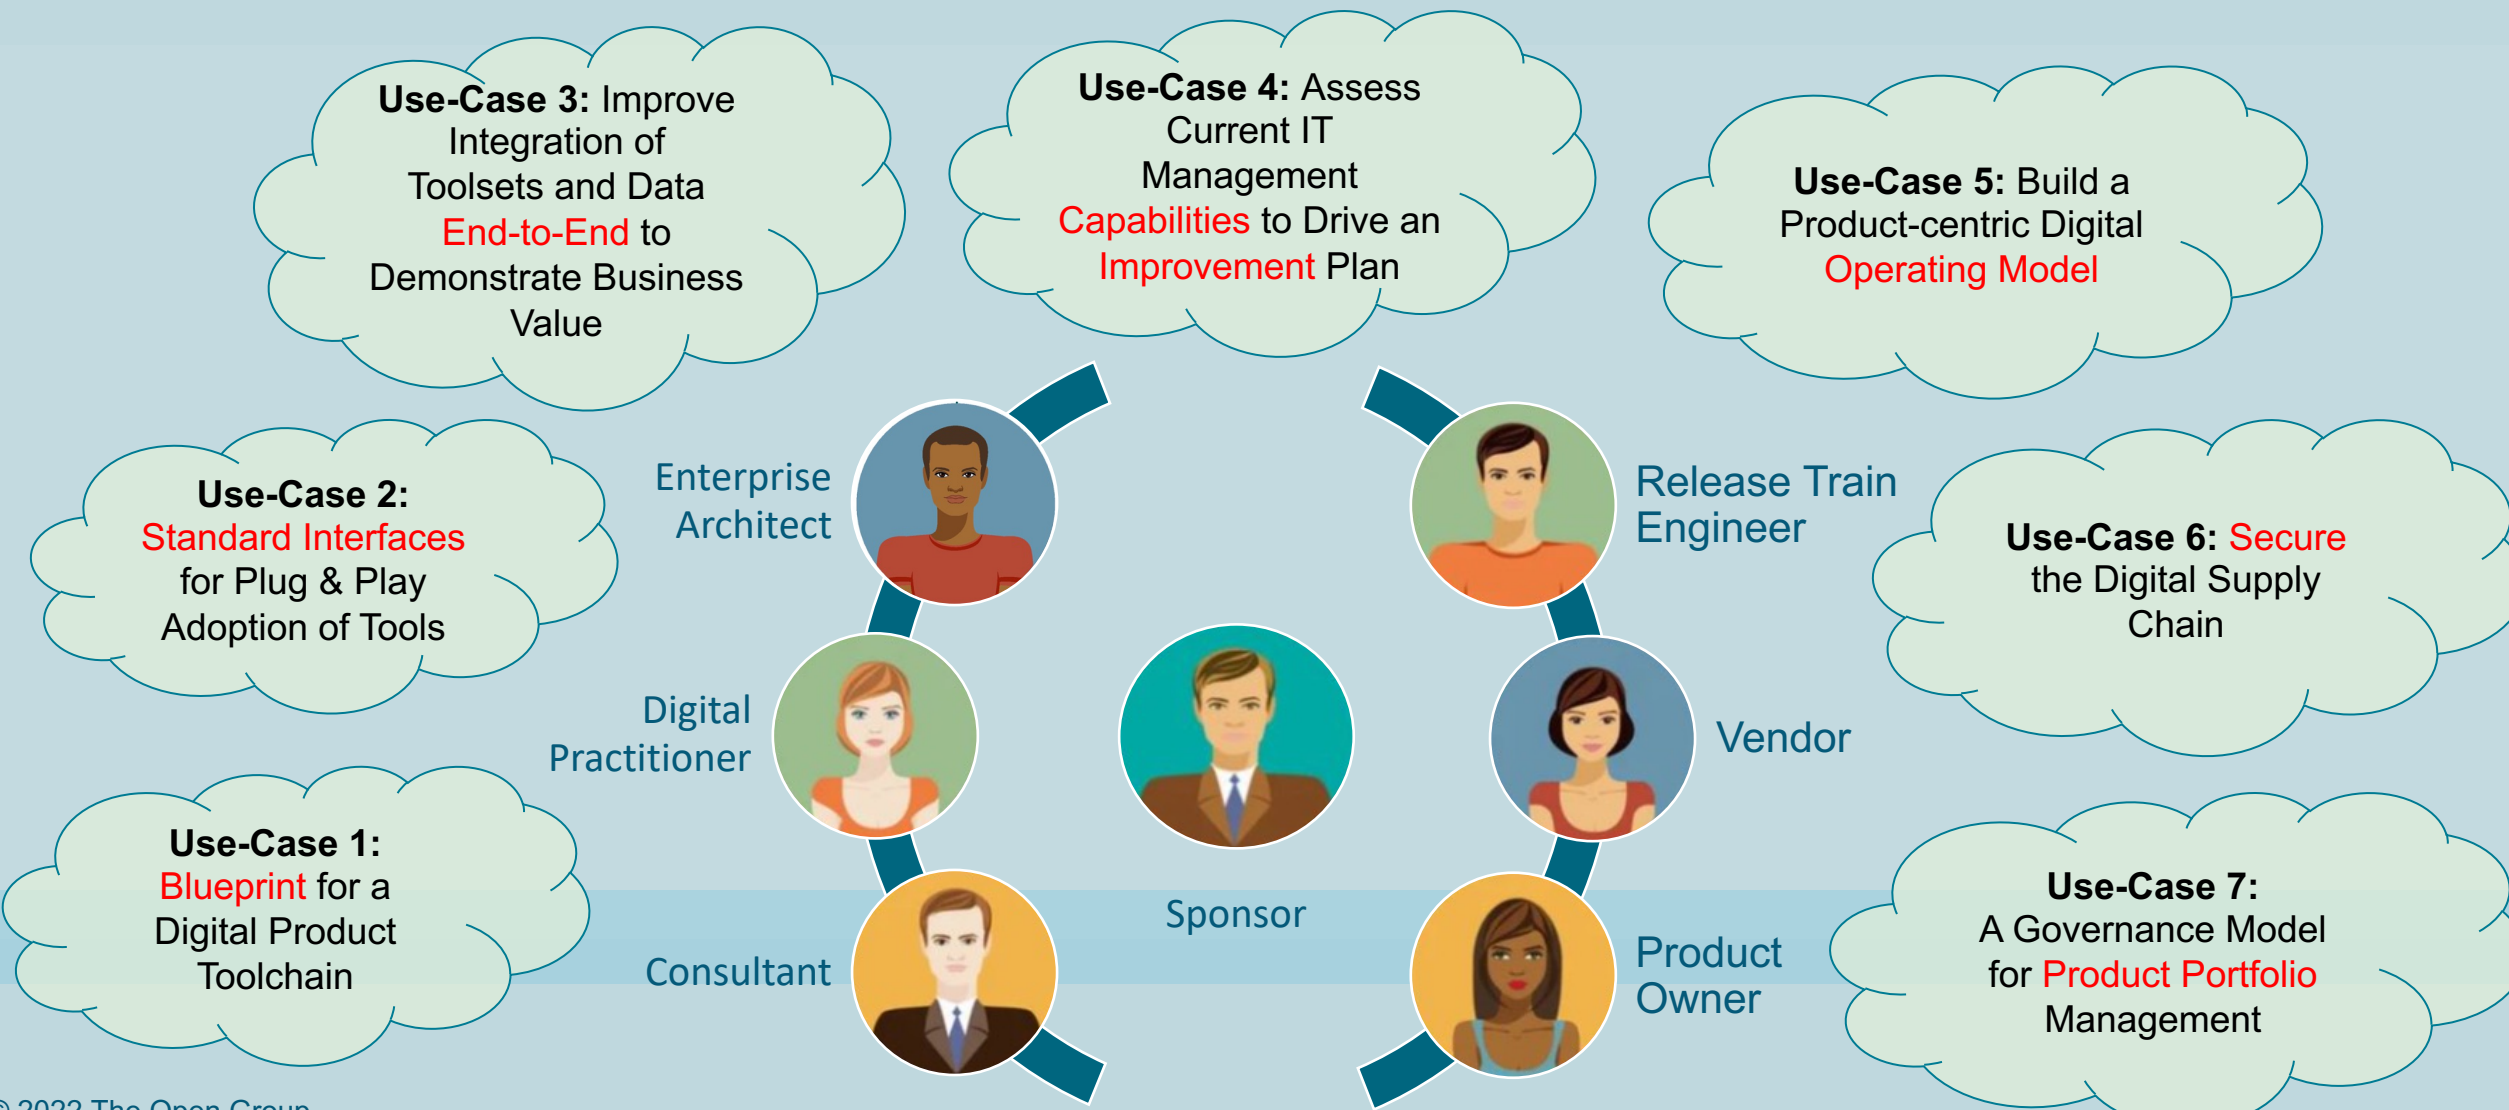

Key ingredients of the IT4IT Standard:

- » Data-driven approach
- » Product backbone
- » Organized around value streams
- » Automation blueprint (for DevSecOps)

The IT4IT™ Standard Magnificent 7 Use-Cases

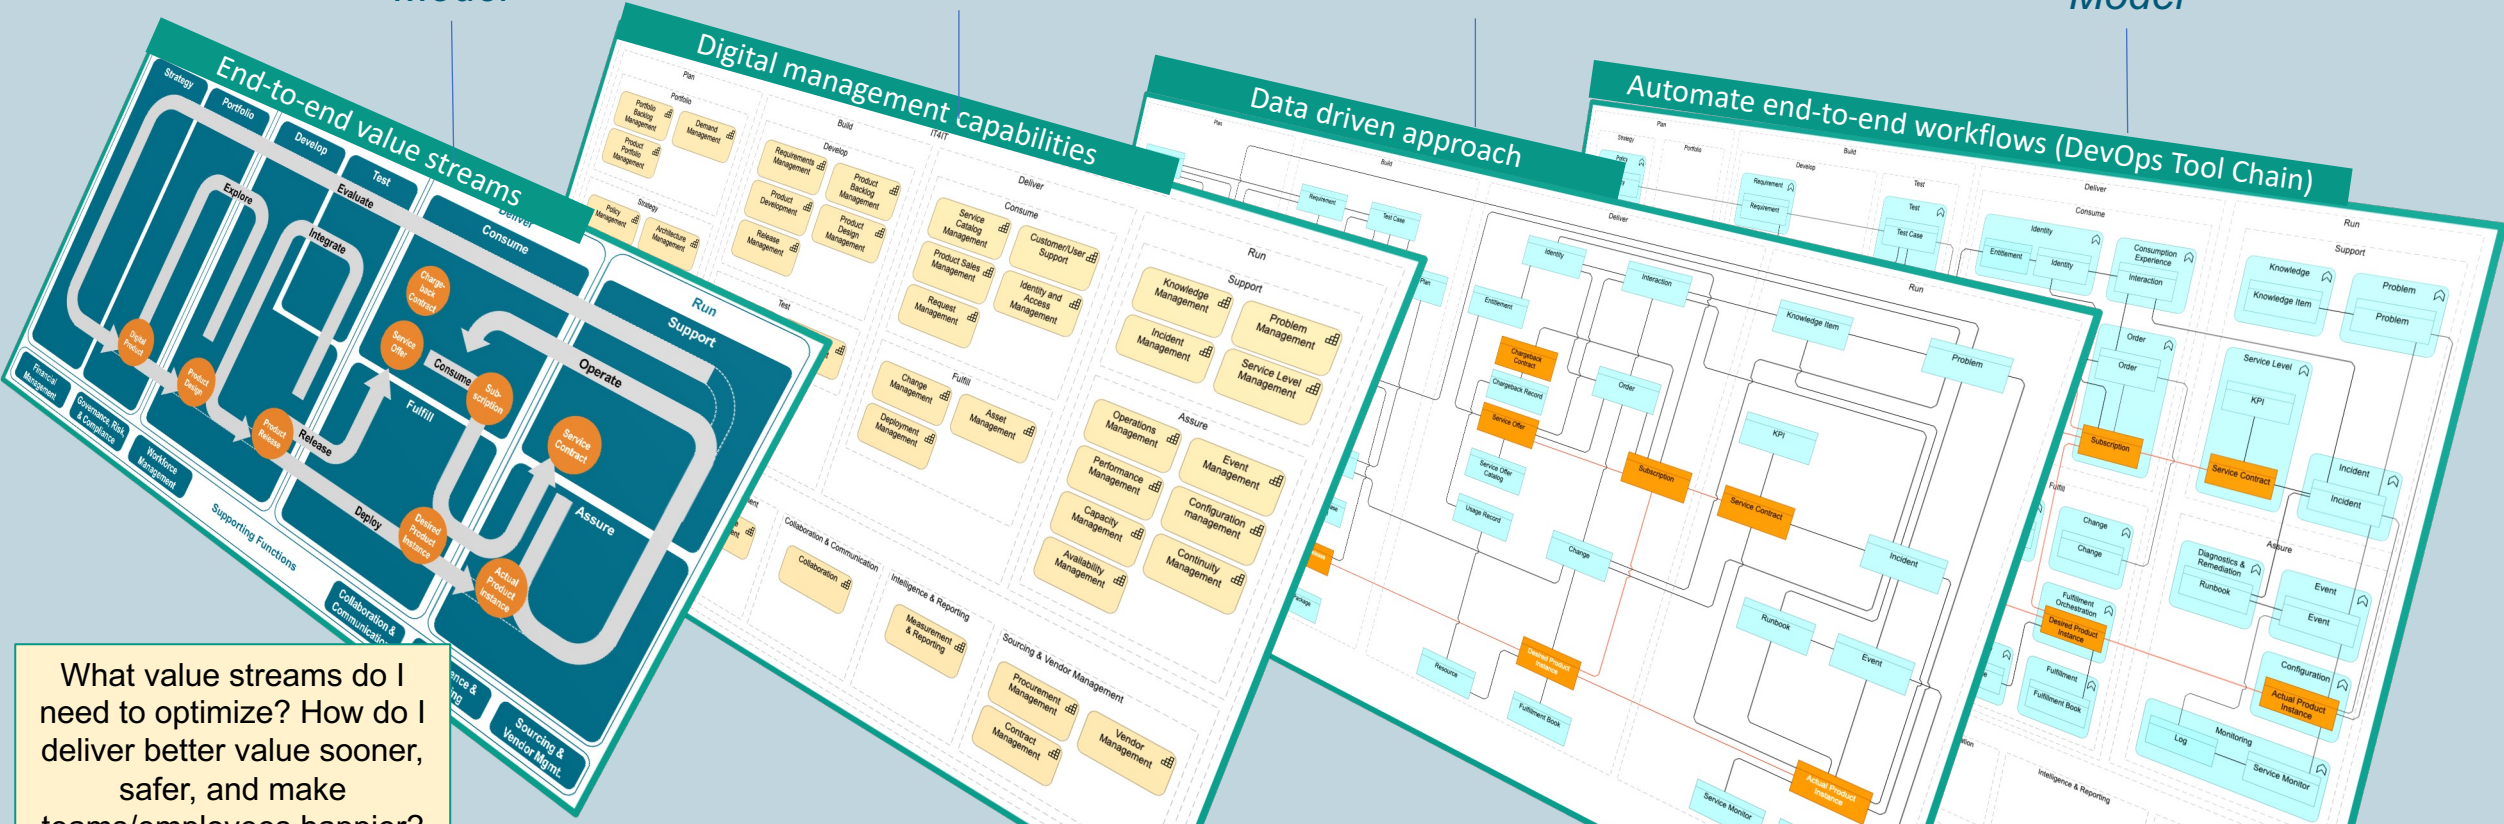

The IT4IT™ Standard for Managing Digital (Version 3.0)

Value Stream Management Model

Capability Model

Model Information / Data

Automation & Integration Model

What value streams do I need to optimize? How do I deliver better value sooner, safer, and make teams/employees happier?
 What stakeholders, roles / people are involved?

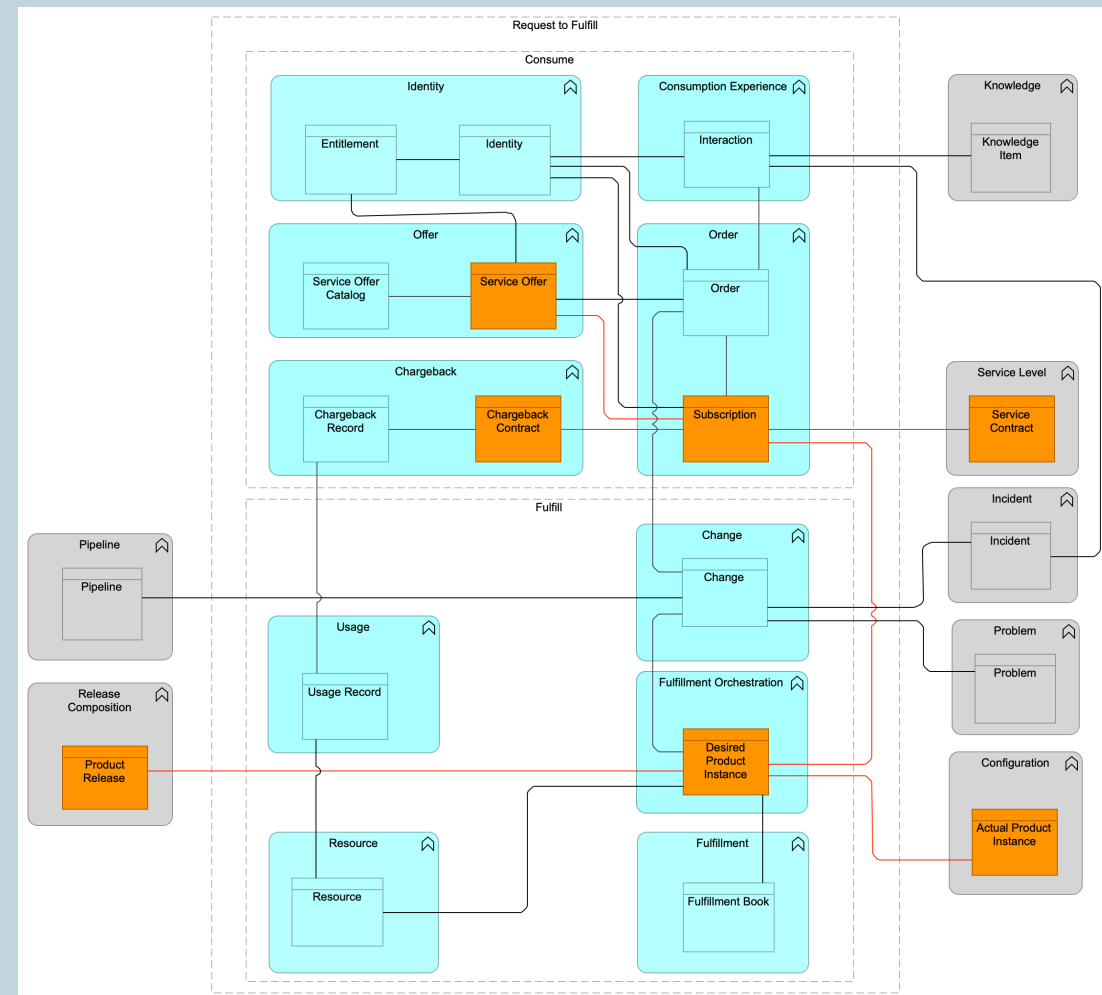

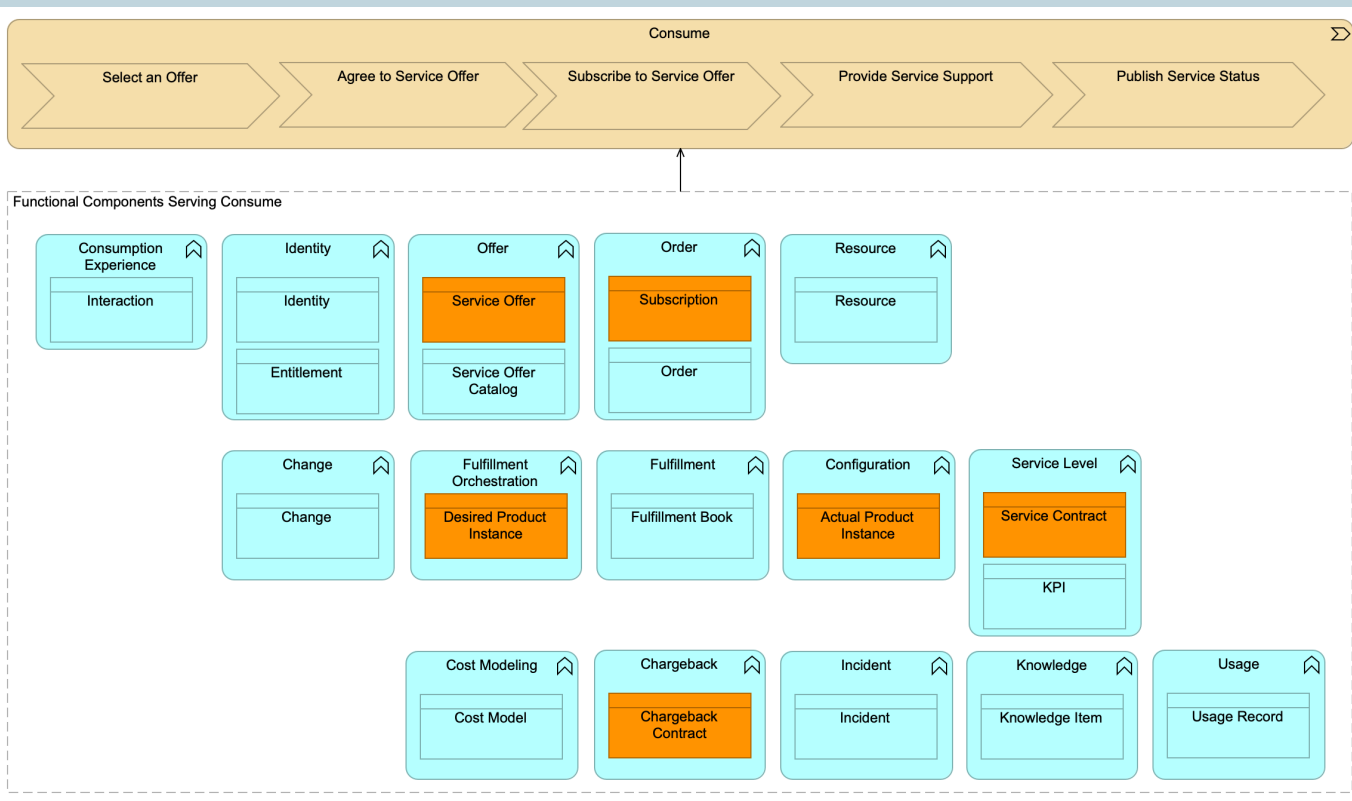

What capabilities do I need?

What data and **data flows** / integrations do I need? How do I get full transparency and traceability?
 Create **insight** for **continuous improvement**....

What building blocks / tools and integrations do I need?

And it is all documented in the ArchiMate® Specification

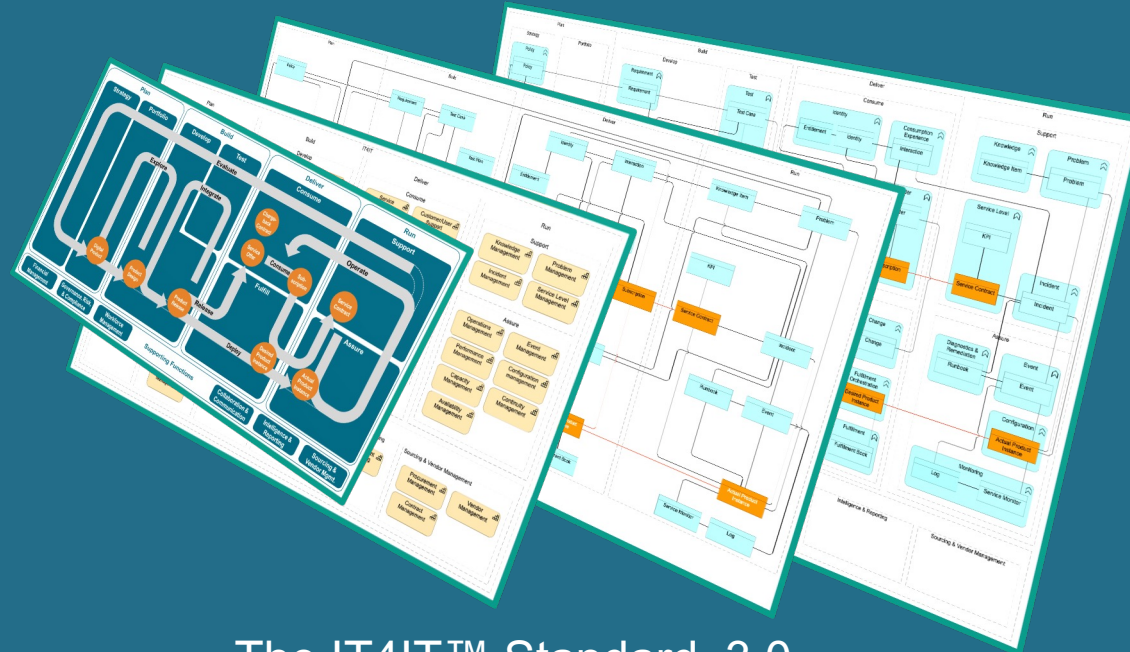

Get ready for your Digital Journey...
