

IT-OT-ET Convergence and PETROBRAS IIoT Centre of Excellence

Pedro Vieira

@ Open Group Brazil Conference

São Paulo – November 10, 2022

#tranS4mar

KEY CHALLENGES FOR THE O&G INDUSTRY (1/2)

Safety and security

- *Improve HSE performance*
- *Increase assets security (cybersecurity)*

Costs

- *Increase exploration success rate*
- *Decrease exploration, project and construction times*
- *Faster and lower-cost supply and logistics*

Productivity

- *Improve sustained productivity*
- *Decrease Operations downtime*
- *Faster and top-quality Engineering designs*

KEY CHALLENGES FOR THE O&G INDUSTRY (2/2)

Integration

- *Improve internal sectors cross-discipline integration*
- *Improve external supply and delivery integration*
- *Decrease vendor technology dependency*

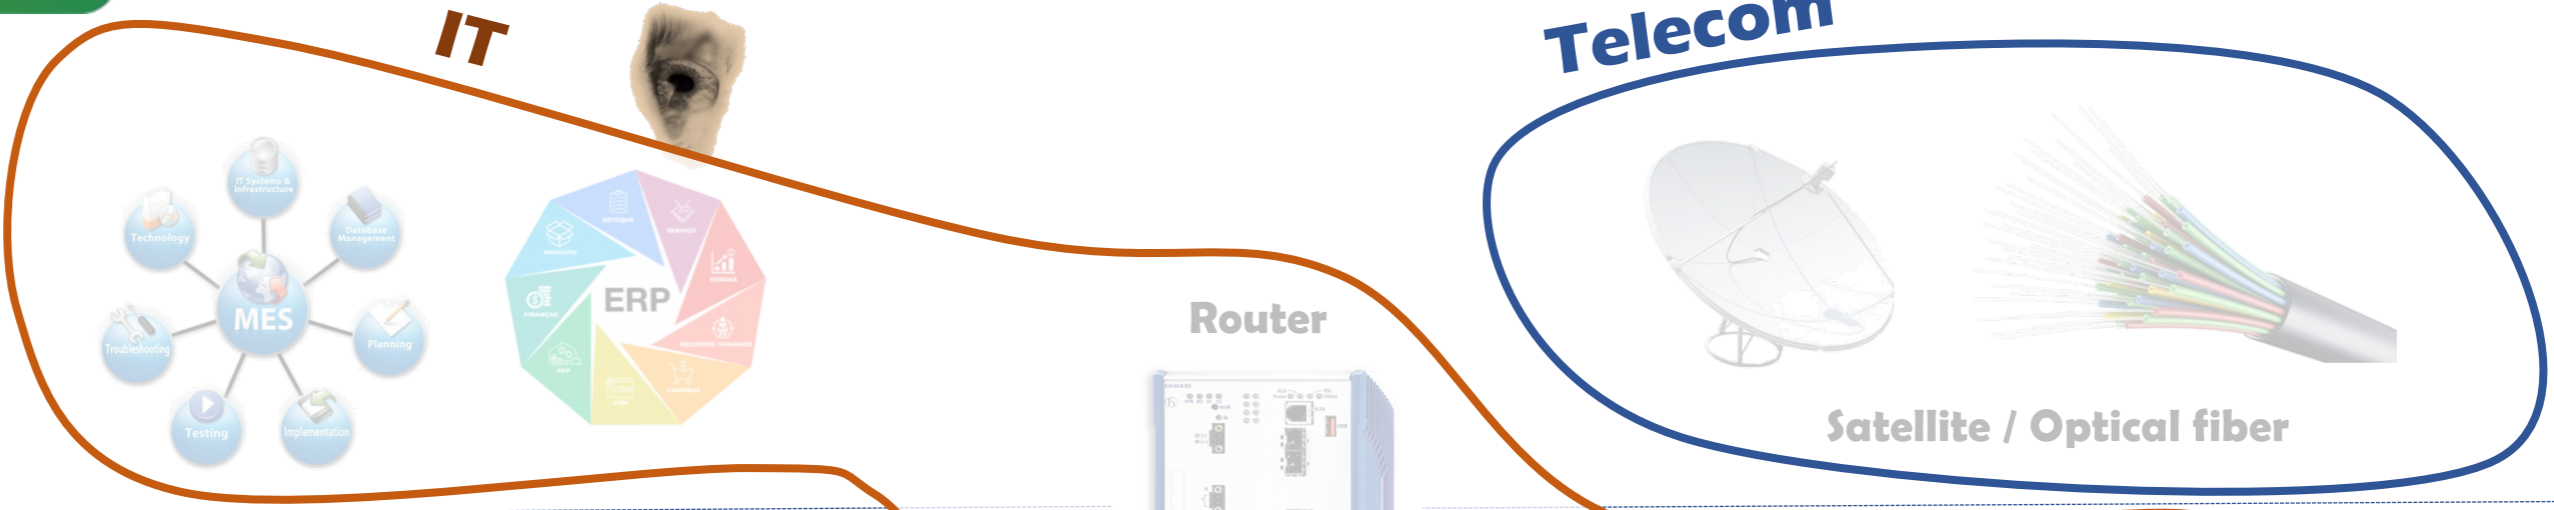

Business

- *More accurate and agile decision taking*
- *Improve leadership and workforce training for a Digital Culture*
- *More efficient business change management model for fast repositioning*

FINAL REMARKS

Outside the plant

Data silos

Management

Inside the plant

Operation Supervision

Industrial controllers (PLCs / DCSS)

Control

Sensors and actuators

Data from the plant

Actions to the plant

4-20mA / Fieldbuses

DIGITAL TRANSFORMATION → INDUSTRY 4.0

- **Data availability** (including field sensing/actuation)
- **Data standards** → data flow
- **Data feedback** → to plant
- **Industrial cybersecurity** (including pervasive)

INDUSTRY 4.0

IT-OT-ET CONVERGENCE – AS IS: 3 SEPARATED DOMAINS

Information Technology

- ERP & Business Apps
- Cloud
- Software design
- Databases
- Workstations & Servers
- Networking
- Cybersecurity
- IT architecture
- Data Science
- Business data

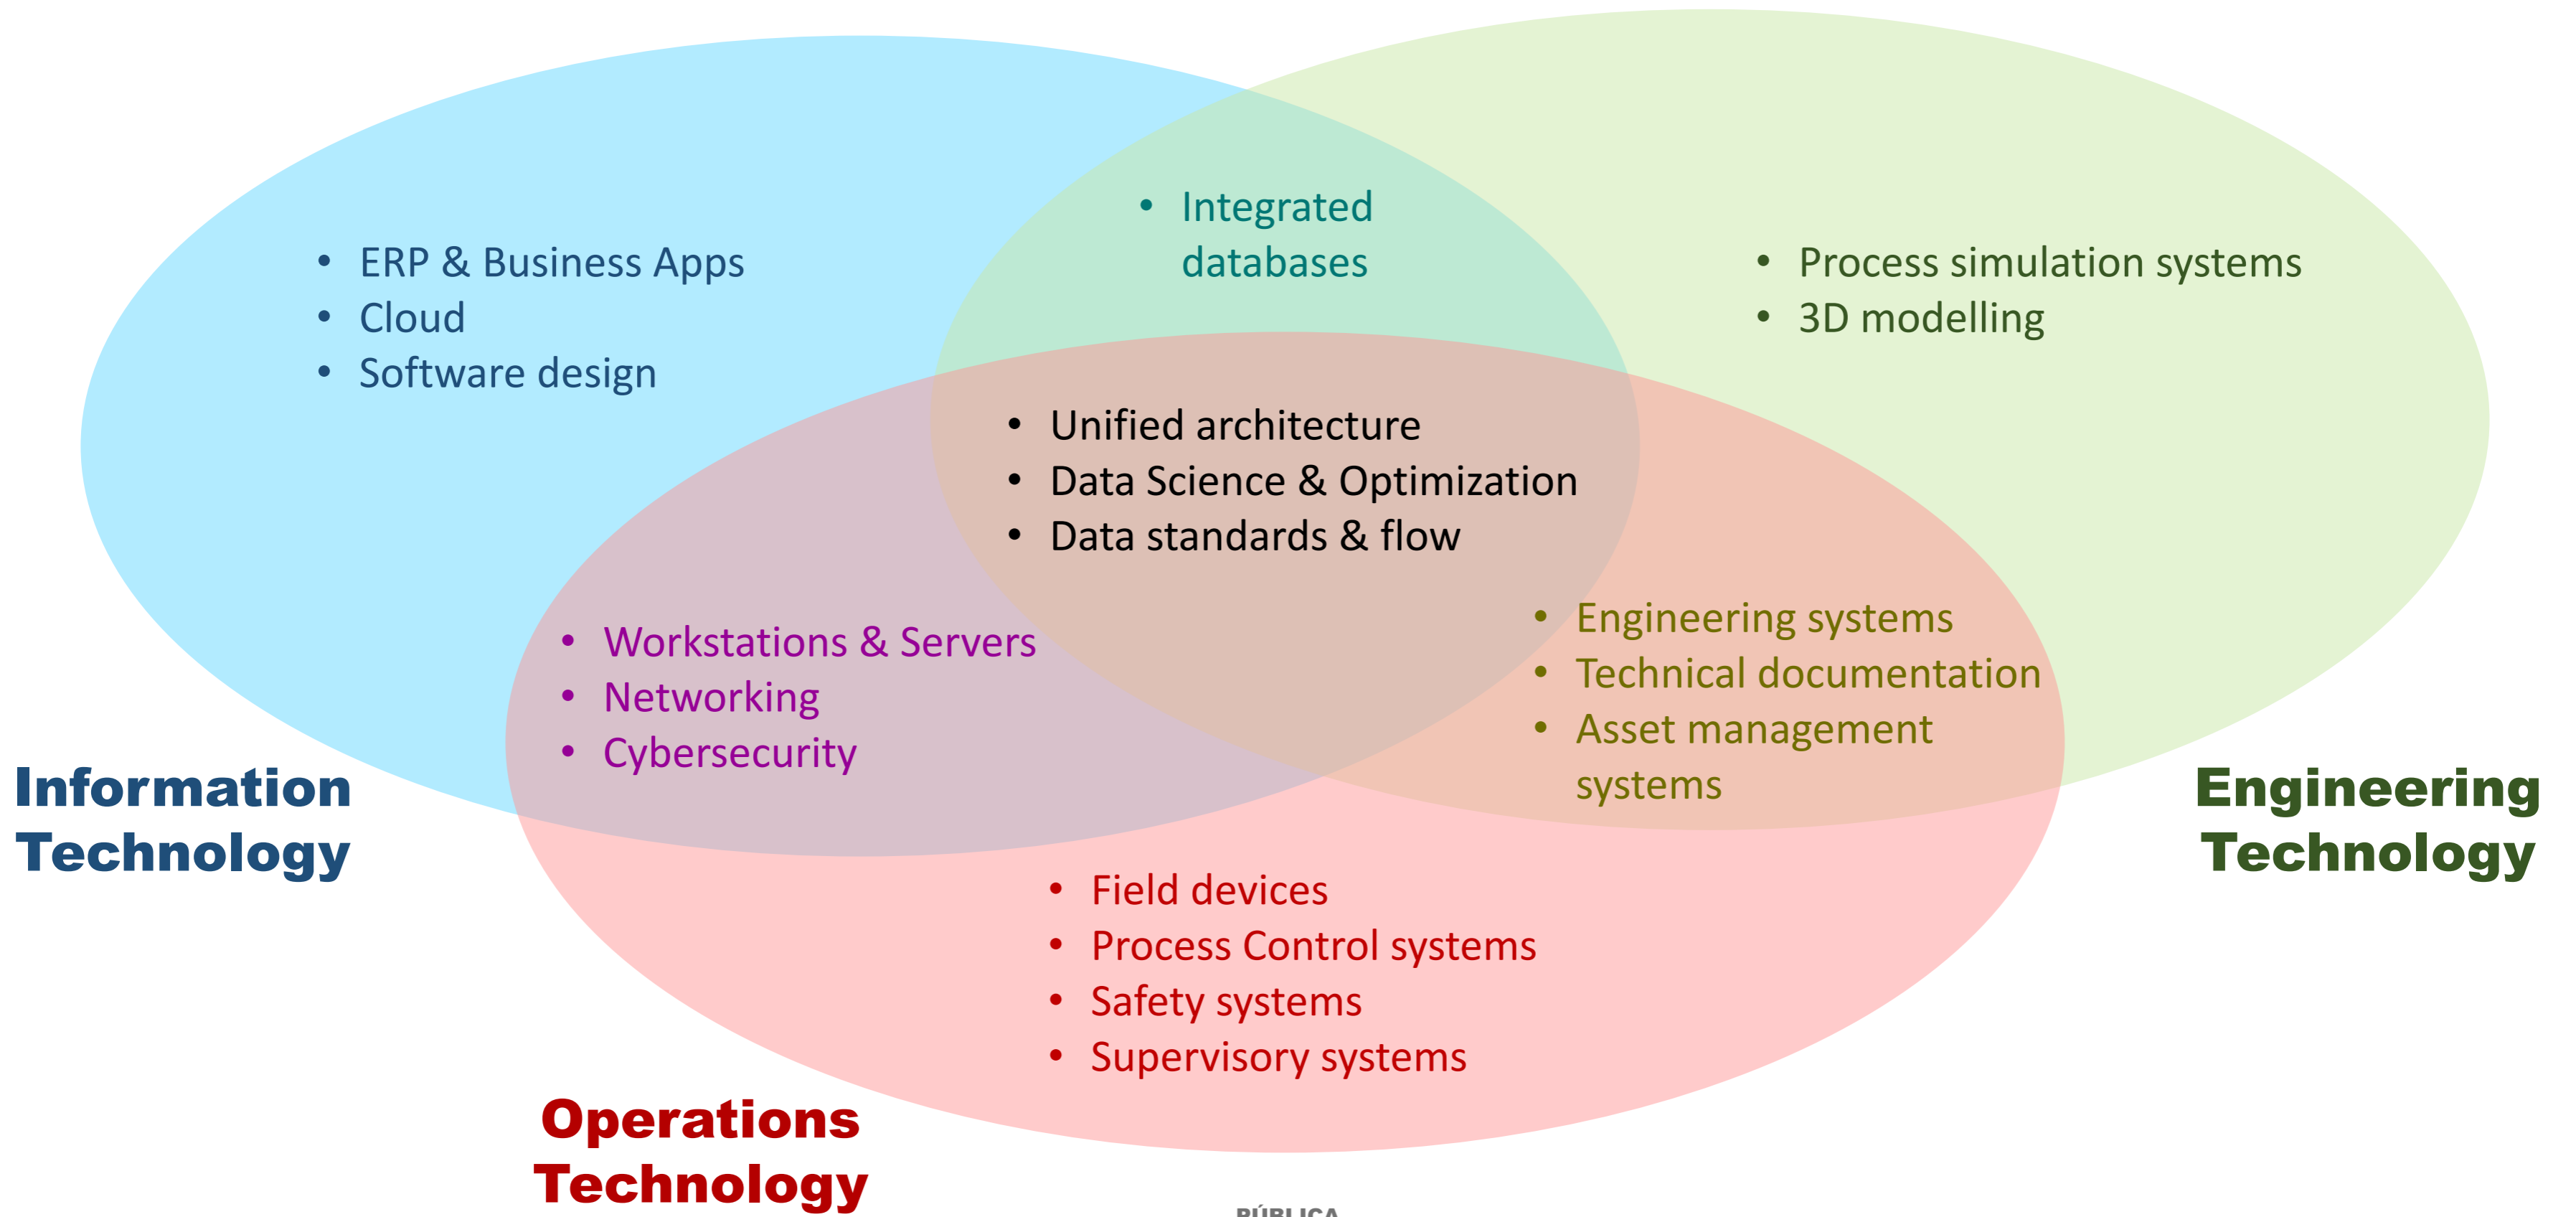

Operations Technology

- Field devices
- Process Control systems
- Safety systems
- Supervisory systems
- Engineering systems
- Technical documentation
- Asset management systems
- Workstations & Servers
- Networking
- Industrial cybersecurity
- Automation architecture
- Optimization systems
- Operations data

Engineering Technology

- Process simulation systems
- 3D modelling
- Engineering systems
- Technical documentation
- Asset management systems
- Engineering databases
- Engineering data
- Data handovers

IT-OT-ET CONVERGENCE – TO BE: INTEGRATED DOMAINS

PETROBRAS IIoT CoE – THE 4 SQUADS AND CURRENT OKRs

4 **ET-OT Integration & Standardization**

Define roadmap for O-PAS™ adoption.
Integrate architecture with Engineering Technology

1 **IT-OT Integration**

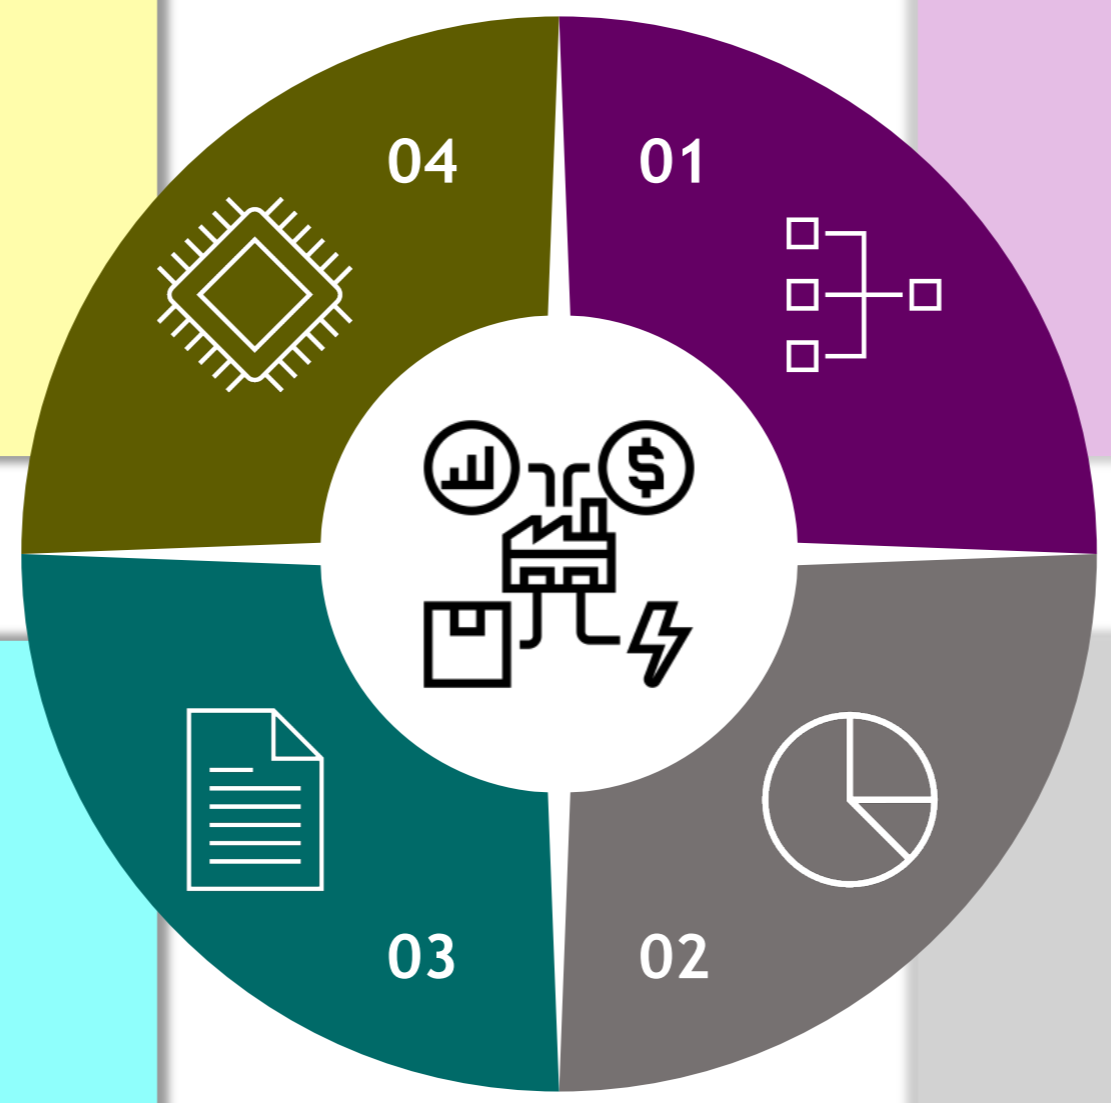

Identify Industry 4.0 gaps.
Define OT-IT processes integration roadmap.
Identify opportunities for use of Services DMZ.

3 **Architecture & Design guidelines**

Define unified architecture model.
Deliver integrated design guidelines.

2 **Data & Analytics**

Define industrial data governance model.
Create/define integrated and standardized data model.

PETROBRAS IIoT CoE – MAIN BUSINESS OUTCOMES EXPECTED

- Increased data and plant visibility
- Integrated operators training

- Core for *phygital* solutions
- IIoT solutions
- Pervasive cybersecurity

- Anticipation of plant startup
- Reduced downtime due to increased availability

- On-time information-based decision support
- Transparent Engineering to Operations data handover

CONCLUSIONS, LESSONS LEARNED, WARNINGS AND OTHER FINAL WORDS

- *(First)* **Strategy** → **Processes** → **Technology** *(Last)*
- Do not forget to train **people**. **Digital practitioners** are very – *VERY* – rare!
- **Link** the initiatives to **business KPIs** and **strategic guidelines** and ... **report**
- **Balance** and give **visibility** to the **deliverables**
 - ✓ **Value** your deliverables
 - ✓ Divide into **short-term** (low effort / quick gain) and **long-term** (structuring)
- Plan **intermediate deliveries** to keep the enthusiasm alive
- **Start!**

THANKS & CONTACT

➤ Thanks to

- ✓ The Open Group for the invitation
- ✓ PETROBRAS IIoT CoE for learning opportunity and support
