

Sarah Douglass is a Principal Software Systems Engineer at MITRE. She has supported NAVAIR since 2018 as a member of the FACE Consortium, where she has focused on the Data Architecture aspects of the FACE Standard. She has an extensive background in model based systems engineering, software engineering, systems engineering, and embedded software development. She is a member of the Object Management Group through her employer and has been active in standards alignment efforts between the FACE Consortium and the Object Management Group.
